SECTION 1

Vision & Mission of the University

VISION

To become one of the most preferred learning places a centre of excellence to promote and nurture future leaders who would facilitate in desired change in the society

MISSION

- M1: To impart teaching and learning through cutting edge technologies supported by the world class infrastructure
- M2: To empower and transform young minds into capable leaders and responsible citizens of India instilled with high ethical and moral values

Program Code: ME-301

SECTION 2

Vision and Mission of the Department

VISION

To contribute to the society through excellence in scientific and technical education and research. To contribute the country by providing globally competent Mechanical Engineers capable of working in an inter-disciplinary environment which foster spirits of innovation, entrepreneurship and leadership. To support industry for growth, being the valuable resource for them, and remain a role model for others in the field of Mechanical Engineering.

MISSION

M1: To provide a high-quality educational experience for undergraduate and graduate students that enables them to become leaders in their chosen professions and to make them globally competitive mechanical engineers.

M2: To create, explore, and develop innovations in engineering and science through undergraduate and graduate research. To develop linkages with world class R&D organizations and educational institutions in India and abroad for excellence in teaching, research and consultancy practices.

SECTION 3

About the Program

Mechanical Engineering Department was established in 2003 with the inception of the institute to produce high quality engineers in the field of Mechanical Engineering. The programme involves application of principles of physics for analysis, design, manufacturing, and maintenance of mechanical systems. It requires a solid understanding of key concepts including Mechanics, Kinematics, Thermodynamics and Energy. Mechanical engineers use these principles and others in the design and analysis of automobiles, aircraft, heating and cooling systems, manufacturing plants, industrial equipment and machinery, medical devices and more.

SECTION 4

Program Educational Objectives (PEOs), Program Outcomes (POs) and Program Specific Outcomes (PSOs)

PROGRAMME EDUCATION OBJECTIVES (PEOs)

PEO1	To prepare learners with a solid foundation in mathematics, sciences, and technical
	skills needed to analyze and design in engineering problems.
PEO2	To be able to explore areas of research, application & innovation and make impact in
	different types of institutional settings such as corporate entities, government bodies,
	NGOs, inter-government organizations, & start-ups.
PEO3	To prepare learners to apply knowledge, strong reasoning, and quantitative skills to
	design and implement creative and sustainable solutions.
PEO4	To prepare learners to effectively use modern equipment's & programming tools to
	solve real life problems that are technically sound, economically feasible and socially
	acceptable.
PEO5	To prepare learners for successful professional career, to excel in higher studies and or
	to become entrepreneur.
PEO6	To be able to continuously learn and update one's knowledge, engage in lifelong
	learning habits and acquire latest knowledge to perform in current work settings.
PEO7	To prepare learners to become responsible citizens by serving the community locally,
	nationally, and internationally.

PROGRAMME OUTCOMES (POs)

PO 1	Apply the knowledge of mathematics, science, engineering fundamentals, and
	mechanical engineering to the solution of complex engineering problems.
PO 2	Identify, formulate, research literature, and analyze complex engineering problems
	reaching substantiated conclusions using first principles of mathematics, natural
	sciences, and engineering sciences
PO 3	Design solutions for complex mechanical engineering problems and design system
	components or processes that meet the specified needs with appropriate consideration
	for the public health and safety, and the cultural, societal, and environmental
	considerations.
PO 4	Use research-based knowledge and research methods including design of experiments,
	analysis and interpretation of data, and synthesis of the information to provide valid
	conclusions.
PO 5	Create, select, and apply appropriate techniques, resources, and modern engineering
	and IT tools including prediction and modeling to complex mechanical engineering
	activities with an understanding of the limitations.
PO 6	Apply reasoning informed by the contextual knowledge to assess societal, health,
	safety, legal and cultural issues and the consequent responsibilities relevant to
	professional engineering practice.
PO 7	Understand the impact of the professional engineering solutions in societal and
	environmental contexts, and demonstrate the knowledge of, and need for sustainable
	development.
PO 8	Apply ethical principles and commit to professional ethics and responsibilities and
	norms of the engineering practice.
PO 9	Function effectively as an individual, and as a member or leader in diverse teams, and
	in multidisciplinary settings.
PO 10	Communicate effectively on complex engineering activities with the engineering
	community and with society at large, such as, being able to comprehend and write
	effective reports and design documentation, make effective presentations, and give and
	receive clear instructions.

PO 11	Demonstrate knowledge and understanding of the engineering and management
	principles and apply these to one's own work, as a member and leader in a team, to
	manage projects and in multidisciplinary environments.
PO 12	Recognize the need for, and have the preparation and ability to engage in independent
	and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

PSO 1	Apply mechanical engineering and interdisciplinary knowledge for analyzing,
	designing and manufacturing products to address the needs of the society.
PSO 2	Apply state of the art tools and techniques to conceptualize, design and introduce new products, processes, systems and services.

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks.

Contents of Syllabus

S.	Content	Contact Hrs
No.	Unit –I	12 Hrs
	Simple, Compound Stresses and Strains: Stress and Strain and their types, Hook's law, longitudinal and lateral strain, Poisson's ratio, stress-strain diagram for ductile and brittle materials, extension of a bar due to without and with self weight, bar of uniform strength, stress in a bar, elastic constants and their significance, relation between elastic constants, Young's modulus of elasticity, modulus of rigidity and bulk modulus. Temperature stress and strain calculation due to axial load and variation of temperature in single and compound bars. Two dimensional stress system, stress at a point on a plane, principal stresses and principal planes, Mohr's circle of stress ellipse of stress and their applications. Generalized Hook's law, principal stresses related to principal strains.	
2	Unit –II Bending Moment (B.M) and Shear Force (S.F) Diagrams: S.F and B.M definitions; relation between load, shear force and bending moment; B.M and S.F diagrams for cantilevers, simply supported beams with or without overhangs, and calculation of maximum B.M and S.F and the point of contra flexure under the following loads: a) Concentrated loads b) Uniformity distributed loads over the whole span or part of span c) Combination of concentrated and uniformly distributed load	18 Hrs

		T .
	d) Uniformly varying loads	
	Application of moments	
	Unit –III	
	Bending Stresses In Beams : Assumptions in the simple bending theory;	
	derivation of formula and its application to beams of rectangular,	
	circular and channel, I and T- sections. Combined direct and bending	
	stresses in afore-mentioned sections, composite / flitched beams.	
3	Unit –IV	10 Hrs
	Torsion: Derivation of torsion equation and its assumptions and	
	its application to the hollow and solid circular shafts. Torsional	
	rigidity, combined torsion and bending of circular shafts;	
	principal stress and maximum shear stresses under combined	
	loading of bending and torsion.	
4	Unit –V	10 Hrs
4	Unit –V Columns and struts: Introduction, failure of columns, Euler's	10 Hrs
4		10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications.	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications. Unit –VI	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications. Unit –VI Slope and deflection: Relationship between moment, slope and	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications. Unit –VI Slope and deflection: Relationship between moment, slope and deflection; method of integration, Macaulay's method, moment	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications. Unit –VI Slope and deflection: Relationship between moment, slope and deflection; method of integration, Macaulay's method, moment area method and use of these methods to calculate slope and	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications. Unit –VI Slope and deflection: Relationship between moment, slope and deflection; method of integration, Macaulay's method, moment area method and use of these methods to calculate slope and deflection for the following:	10 Hrs
4	Columns and struts: Introduction, failure of columns, Euler's formula, Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications. Unit –VI Slope and deflection: Relationship between moment, slope and deflection; method of integration, Macaulay's method, moment area method and use of these methods to calculate slope and deflection for the following: a) Cantilevers	10 Hrs

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2301.1	Able to understand the theory of elasticity including strain/displacement and Hooke's law relationships
CO2	BTME-2301.2	Determine the resistance and deformation in machine members subjected to axial, flexural and tensional loads
CO3	BTME-2301.3	Able to analyze the stresses and deflections of beams under various loading conditions
C04	BTME-2301.4	Able to obtain solutions to column buckling and plate problems

Contents of Syllabus

S.	Contents	Contact
No.		Hrs
1	Unit –I	18 Hrs
	Basic Concept of machines: Link, Mechanism, Kinematic Pair and	
	Kinematic Chain, Principles of Inversion, Inversion of a Four Bar Chain,	
	Slider-Crank-Chain and Double Slider-Crank-Chain. Graphical and	
	Analytical methods for finding: Displacement, Velocity, and Acceleration of	
	mechanisms (including Corliolis Components).	
	Unit –II	
	Lower and higher Pairs: Universal Joint, Calculation of maximum Torque,	
	Steering Mechanisms including Ackerman and Davis approximate steering	
	mechanism, Engine Indicator, Pentograph, Straight Line Mechanisms,	
	Introduction to Higher Pairs With Examples	
2	Unit –III	6 Hrs
	Belts, Ropes and Chains: Material & Types of belt, Flat and V-belts, Rope	
	& Chain Drives, Idle Pulley, Intermediate or Counter Shaft Pulley, Angle	
	and Right Angle Drive, Quarter Turn Drive, Velocity Ratio, Crowning of	
	Pulley, Loose and fast pulley, stepped or cone pulleys, ratio of tension on	
	tight and slack side of belts, Length of belt, Power transmitted by belts	
	including consideration of Creep and Slip, Centrifugal Tensions and its	
	effect on power transmission	

3	Unit –IV	16 Hrs
	Cams: Types of cams and follower, definitions of terms connected with	
	cams. Displacement, velocity and acceleration diagrams for cam followers.	
	Analytical and Graphical design of cam profiles with various motions	
	(SHM, uniform velocity, uniform acceleration and retardation, cycloidal	
	Motion). Analysis of follower motion for circular, convex and tangent cam	
	profiles.	
	Unit –V	
	Friction Devices: Concepts of friction and wear related to bearing and	
	clutches. Types of brakes function of brakes. Braking of front and rear tyres	
	of a vehicle. Determination of braking capacity, Types of dynamometers,	
	(absorption, and transmission).	
4	Unit –VI	10 Hrs
	Flywheels: Turning moment and crank effort diagrams for reciprocating	
	machines' Fluctuations of speed, coefficient of fluctuation of speed and	
	energy, Determination of mass and dimensions of flywheel used for engines	
	and punching machines.	
	Unit –VII	
	Governors: Function, types and characteristics of governors. Watt, Porter	
	and Proell governors. Hartnell and Willson-Hartnell spring loaded	
	governors. Numerical problems related to these governors. Sensitivity,	
	stability, isochronisms and hunting of governors. Governor effort and	
	power, controlling force curve, effect of sleeve friction.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2302.1	Students will be able to analyze planer mechanisms terms of DoF, Gross Motion, Velocity and Acceleration of Points on Link / Links, Forces acting on links and joints
CO2	BTME-2302.2	Synthesize simple mechanisms
CO3	BTME-2302.3	Analyze and synthesis cams, clutches, and flywheel
C04	BTME-2302.4	Analyze and determine key kinematic parameters for friction mechanisms

Suggested Readings / Books:

- 1. S. S. Rattan, Theory of Machines, Tata McGraw Hill, New Delhi. 2010
- 2. JagdishLal, Theory of Mechanisms & Machines, Metropolitan Book Co. 2006
- 3. Thomas Beven, Theory of Machines, Longman's Green & Co., London. 2010
- 4. W. G. Green, Theory of Machines, Blackie & Sons, London 2012
- 5. V.P. Singh, Theory of Machines DhanpatRai. 2008

Program Code: ME-301

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks.

Contents of Syllabus

S.No.	Contents	Contact Hrs
1	Unit –I Introduction: Principles of Drawing, Requirements of production drawing, Sectioning and conventional representation, Dimensioning, symbols of standard tolerances, Machining Symbols, introduction and Familiarization of Code IS: 296	
2	Unit –II Fasteners: Various types of screw threads, types of nuts and bolts, screwed fasteners, welding joints and riveted joints	10 Hrs
3	 Unit –III Assembly and Disassembly: a) Couplings: Solid or Rigid Coupling, Protected Type Flange coupling, Pin type flexible coupling, muff coupling, Oldham, universal coupling, claw coupling, cone friction clutch, free hand sketch of single plate friction clutch. b) Knuckle and cotter joints c) Pipe and Pipe Fittings: flanged joints, spigot an socket joint, union joint, hydraulic an expansion joint d) IC Engine Parts: Piston, connecting rod e) Boiler Mountings: Steam stop valve, feed check valve, safety valve, blow off cock. f) Bearings: Swivel bearing, thrust bearing, Plummer block, angular plumber block g) Miscellaneous: Screw Jack, Drill Press Vice, Crane hook, Tool 	40 Hrs

Post, Tail Stock, Drilling Jig. Drafting of simple mechanical	
components on computer.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2303.1	To make students understand the principles and requirements of production drawings and learning how to assemble and disassemble important parts used in major mechanical engineering applications
CO2	BTME-2303.2	To understand the drawings of mechanical components and their assemblies along with their utility for design of components
CO3	BTME-2303.3	Draw the projections of various mechanical components in terms of top, side and front views
C04	BTME-2303.4	Draw the projections of various miscellaneous components in terms of top, side and front views

Suggested Readings / Books:

- 1. Ajit Singh, Machine Drawing (including Auto CAD), Tata McGraw Hill., 2006
- 2. A Text Book of Machine Drawing by R. K. Dhawan, S. Chand and Co. Ltd., 1998
- 3. N.D. Bhatt, Machine Drawing, Charotar publications., 1995
- 4. N. Sidheshwar, Machine Drawing, Tata McGraw Hill. 2002
- 5. P.S. Gill, Machine Drawing, BD Kataria and Sons.2000
- 6. V Lakshmi Narayanan and Mathur, Text-book of Machine Drawing. 2004

Contents of Syllabus

S. No.	Contents	Contact Hrs
1	Unit –I	16 Hrs
	Combustion: Combustion Equations (Stoichiometric and non-	
	Stoichiometric). Combustion problems in Boilers and IC	
	engines/Calculations of air fuel ratio, Analysis of products of combustion,	
	Conversion of volumetric analysis into gravimetric analysis and vice-	
	versa, Actual weight of air supplied, Use of mols, for solution of	
	combustion problems, Heat of formation, Enthalpy of formation,	
	Enthalpy of reaction, Adiabatic flame temperature.	
	Unit –II	
	IC Engines Introduction: Actual Engine Indicator diagrams and valve-	
	timing diagrams for two stroke and four stroke S.I. and C.I. Engines;	
	Construction and Working Principle of Wankel rotary engine;	
	Principle of simple carburator, Injection systems in Diesel and Petrol	
	Engines(Direct Injection, MPFI in SI and CI Engines, respectively).	
	Essential requirements for Petrol and Diesel Fuels. Theory of combustion	
	in SI and CI Engines; Various stages of combustion; Pressure-time/crank	
	- Angle diagrams; Various phenomenon such as turbulence, squish and	
	swirl, dissociation, pre-ignition/auto- ignition, and after burning etc.;	
	Theory of knocking (ie,. detonation) in SI and CI Engines; Effect of	
	engine variables on the Delay Period in SI and CI engines; Effect of	
	various parameters on knock in SI and CI Engines; Methods employed to	
	reduce knock in SI and CI Engines; Octane and Cetane rating of fuels;	
	Knockmeter; Dopes and inhibitors; Performance curves/maps of SI and	

	CI Engines; Effect of knocking on engine performance; Effect of <i>compression ratio</i> and <i>air-fuel ratio</i> on power and efficiency of engine; Variation of engine power with altitude; Supercharging and turbo	
	charging of SI and CI Engines; Advantages and applications of	
	supercharging; Emissions from SI and CI Engines and methods to	
	reduce/control them. Logarithmic plotting of PV-diagrams. High speed	
	Engine Indicators.	
2	Unit –III	10 Hrs
	Properties of Steam	
	Pure substance; Steam and its formation at constant pressure: wet, dry,	
	saturated and super-heated steam; Sensible heat(enthalpy), latent heat and	
	total heat (enthalpy) of steam; dryness fraction and its determination;	
	degree of superheat and degree of sub-cool; Entropy and internal energy	
	of steam; Use of Steam Tables and Mollier Chart; Basic thermodynamic	
	processes with steam (isochoric, isobaric, isothermal, isentropic and	
	adiabatic process) and their representation on T-S Chart and Mollier	
	Charts(h-s diagrams). Significance of Mollier Charts.	
	Unit –IV	
	Steam Generators - Definition: Classification and Applications of	
	Steam Generators; Working and constructional details of fire-tube and water-tube boilers: (Cochran, Lancashire, Babcock and Wilcox boilers);	
	Merits and demerits of fire-tube and water-tube boilers; Modern high	
	pressure boilers (Benson boiler, La Mont boiler) and Super critical boilers	
	(Once through boilers- <i>Tower type</i>); Advantages of forced circulation;	
	Description of boiler mountings and accessories: Different types of	
	Safety Valves, Water level indicator, pressure gauge, Fusible plug, Feed	
	pump, Feed Check Valve, Blow-off Cock, Steam Stop-Valve,	
	Economiser, Super-heater; Air pre-heater and Steam accumulators; Boiler	
	performance: equivalent evaporation, boiler efficiency.	
3	Unit –V	22 Hrs
	Vapour Power Cycle Carnot Cycle and its limitations; Rankine steam	
	power cycle, Ideal and actual; Mean temperature of heat addition; Effect	
	of pressure, temperature and vacuum on Rankine Efficiency; Rankine	
	Cycle Efficiency and methods of improving Rankine efficiency: Reheat	
	cycle, Bleeding (feed-water-heating), Regenerative Cycle, Combined	
	reheat-regenerative cycle; Ideal working fluid; Binary vapour cycle,	
	Combined power and heating cycles.	
	Unit –VI	
	Steam Nozzles: Definition, types and utility of nozzles; Flow of steam	
	through nozzles; Condition for maximum discharge through nozzle; Critical pressure ratio, its significance and its effect on discharge; Area of	
	throat and at exit for maximum discharge; Effect of friction; Nozzle	
	efficiency; Convergent and convergent-divergent nozzles; Calculation of	
	Nozzle dimensions (length and diameters of throat and exit);	
	Supersaturated (or metastable) flow through nozzle.	
	Unit -VII	
1		

	Steam Turbines Introduction; Classification; Impulse versus Reaction turbines. Simple impulse turbine: pressure and velocity variation, Velocity diagrams/triangles; Combined velocity diagram/triangle and calculations for force, axial thrust, work, power, blade efficiency, stage efficiency, maximum work and maximum efficiency, effect of blade friction on velocity diagram, effect of speed ratio on blade efficiency, condition for axial discharge.	
4	Unit –VIII De Laval Turbine: Compounding of impulse turbines: purpose, types and	12 Hrs
	pressure and velocity variation, velocity diagrams/triangles, combined	
	velocity diagram/triangle and calculations for force, axial thrust, work, power, blade efficiency, stage efficiency, overall efficiency and relative	
	efficiency.	
	Unit –IX	
	Impulse-Reaction Turbine: pressure and velocity variation, velocity	
	diagrams/triangles, Degree of reaction, combined velocity	
	diagram/triangle and calculations for force, axial thrust, work, power,	
	blade efficiency, stage efficiency, overall efficiency and relative efficiency, maximum work and maximum efficiency; Calculations of	
	blade height; Multistaging : Overall efficiency and relative efficiency;	
	Reheating, Reheat factor and condition curve; Losses in steam turbines;	
	Back pressure and extraction turbines; Co-generation; Economic	
	assessment; Governing of steam turbines.	
	Unit –X	
	Steam Condensers Function; Elements of condensing unit; Types of	
	condensers; Dalton's law of partial pressures applied to the condenser	
	problems; Condenser and vacuum efficiencies; Cooling water calculations;	
	Effect of air leakage; Method to check and prevent air infiltration;	
	Description of air pump and calculation of its capacity; Cooling towers: function, types and their operation.	
	runction, types and then operation.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2304.1	To understand combustion phenomenon and thermal analysis of steam	
		power plant components.	
CO2	BTME-2304.2	Able to understand the fundamental of the first and second laws of	
		thermodynamics and their application to a wide range of systems.	
CO3	BTME-2304.3	Familiar with the fundamental of the air standard cycles and their	
		applications	
C04	BTME-2304.4	Have Knowledge of the operation, construction and design of various	
		components of power plants	

Suggested Readings / Books:

Contents of Syllabus

S. No.	Contents	Contact Hrs
1	Unit –I	12 Hrs
	Crystallography: Atomic structure of metals, atomic bonding in solids, crystal structures, crystal lattice of body centered cubic, face centered cubic, closed packed hexagonal; crystalline and non crystalline materials; crystallographic notation of atomic planes; polymorphism and allotropy; imperfection in solids: theoretical yield strength, point defects, line defects and dislocations, interfacial defects, bulk or volume defects. Diffusion: diffusion mechanisms, steady-state and non-steady-state diffusion, factors affecting diffusion. Theories of plastic deformation, recovery, re-crystallization.	
2	Unit –II	15 Hrs
	Phase Transformation: General principles of phase transformation in alloys, phase rule and equilibrium diagrams, Equilibrium diagrams of Binary systems. Iron carbon equilibrium diagram and various phase transformations. Time temperature transformation curves (TTT curves): fundamentals, construction and applications.	
3	Unit –III	10 Hrs
	Heat Treatment: Principles and applications. Processes viz. annealing, normalizing, hardening, tempering. Surface hardening of steels: Principles of induction and oxyacetylene flame hardening. Procedure for carburising, nitriding and cyaniding. Harden-ability: determination of harden-ability. Jominy end-quench test. Defects due to heat treatment and their remedies; effects produced by alloying elements. Composition of	

	alloy steels.	
4	Unit –IV	8 Hrs
	Ferrous Metals and Their Alloys: Introduction, classification,	
	composition of alloys, effect of alloying elements (Si, Mn, Ni, Cr, Mo, W,	
	Al) on the structures and properties of steel.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2306.1	The students will learn the atomic structure of metals, imperfections, diffusion mechanisms and theories of plastic deformation
CO2	BTME-2306.2	To understand equilibrium diagrams, time-temperature transformation curves and heat treatment processes
CO3	BTME-2306.3	Analyze the various properties of Engineering materials
C04	BTME-2306.4	Determine the various stages of materials along with the method of cooling

Suggested Readings / Books:

Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Unit –I Introduction: Classification of manufacturing processes, selection criteria for manufacturing processes, general trends in manufacturing	5 Hrs
2	Unit –II Casting Processes: Introduction to metal casting. patterns: types, materials and allowances. Moulding materials: moulding sand compositions and properties, sand testing, types of moulds, moulding machines. Cores: function, types, core making process, core-prints, chaplets. Elements of gating system and risers and their design. Design considerations of castings. Melting furnaces, cupola furnace, charge calculations, induction furnaces. Casting processes: sand casting, shell mould casting, investment casting, permanent mould casting, full mould casting, vacuum casting, die casting, centrifugal casting, and continuous casting. Metallurgical considerations in casting, Solidification of metals and alloys, directional solidification, segregation, nucleation and grain growth, critical size of nucleus. Cleaning and finishing of castings	15 Hrs
3	Unit –III Welding Processes: Introduction and classification of welding processes, to welding processes, weldability, welding terminology, general principles, welding positions, and filler metals. Gas welding: principle and practice, oxy-acetylene welding equipment, oxy-hydrogen welding. Flame cutting. Electric arc welding: principle, equipment, relative merits of AC & DC arc welding. Welding processes: manual metal arc welding, MIG welding, TIG welding, plasma arc welding,	15 Hrs

	submerged arc welding. Welding arc and its characteristics, arc stability, and arc blow. Thermal effects on weldment: heat affected zone, grain size and its control. Electrodes: types, selection, electrode coating ingredients and their function. Resistance welding: principle and their types i.e. spot, seam, projection, up-set and flash. Spot welding machine. Advanced welding processes: friction welding, friction stir welding, ultrasonic welding, laser beam welding, plasma arc welding, electron beam welding, atomic hydrogen welding, explosive welding, thermit welding, and electro slag welding. Considerations in weld joint design. Other joining processes: soldering, brazing, braze welding.	
4	Unit –IV Inspection and Testing: Casting defects, their causes and remedies. Welding defects, their causes and remedies. Destructive and non-destructive testing: visual inspection, x-ray radiography, magnetic particle inspection, dye penetrate test, ultrasonic inspection, eddy current testing, hardness testing, and micro hardness testing.	10 Hrs

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2305.1	To provide students with an overview of a wide variety of manufacturing processes for processing of engineering materials
CO2	BTME-2305.2	To learn principles, operations and capabilities of various metal casting and metal joining processes
CO3	BTME-2305.3	To learn about the casting defects, their causes and remedies in these processes
C04	BTME-2305.4	To analyze the inspection and testing of various mechanical materials

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	ContactHrs
1	Introduction: Renewable and non-renewable energy sources, their availability and growth in India; energy consumption as a measure of Nation's development; strategy for meeting the future energy requirements	10 Hrs
2	Solar Energy: Solar radiation - beam and diffuse radiation; earth sun angles, attenuation and measurement of solar radiation; Optical properties of materials and selective surfaces; Principles, general description and design procedures of flat Platte and concentrating collectors; Performance analysis of cylindrical and parabolic collectors; Solar energy storage systems - their types, characteristics and capacity; solar ponds. Applications of solar energy in water, space and process heating, solar refrigeration and air conditioning; water desalination and water pumping; solar thermal power generation; solar cells and batteries; economic analysis of solar systems.	7 Hrs
3	Wind Energy: Principle of wind energy conversion; Basic components of wind energy conversion systems; wind mill components, various types and their constructional features; design considerations of horizontal and vertical axis wind machines: analysis of accodynamic forces acting on wind mill blades and estimation of power output; wind data and site selection	10 Hrs

	considerations.	
4	Direct energy conversion systems: i) Magnetic Hydrodynamic (MHD) Generator: gas conductivity and MHD equations; operating principle, types and working of different MHD systems – their relative merits; MHD materials and production of magnetic fields. ii) Thermo-electric generators: Thermo-electric effects and materials; thermo-electric devices and types of thermo-electric generators; thermo-electric refrigeration. iv) iii) Thermionic generators: thermoionic emission and materials; working principle of thermionic Fuel Cells: thermodynamic aspects; types, components and working of fuel cells.	8 Hrs
	v) Performance, applications and economic aspects of above mentioned	
	direct energy conversions systems.	
5	 Miscellaneous Non-Conventional energy Systems: i) Bio-mass: Concept of bio-mass conversion, photo-synthesis and biogasification; Bio gas generators and plants - their types constructional features and functioning; digesters and their design; Fuel properties of bio gas and community bio gas plants ii) Geothermal: Sources of geothermal energy - types, constructional features and associated prime movers. iii) Tidal and wave energy: Basic principles and components of tidal and wave energy plants; single basin and double basin tidal power plants; conversion devices Advantages/disadvantages and applications of above mentioned energy systems. 	10 Hrs

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2311.1	To understand need and Significance of renewable and non-renewable energy sources
CO2	BTME-2311.2	To understand the working of various energy sources
CO3	BTME-2311.3	Analyze of various direct energy conversion systems
C04	BTME-2311.4	The student shall be competent enough to make use of modern tools and software's for analyzing and solving real life problems

(Department Elective: I)

SUBJECT TITLE: INDUSTRIAL ENGINEERING

SUBJECT CODE: BMEC-2312

SEMESTER: 3rd

CONTACT HOURS/WEEK:

Lecture (L)	Tutorial (T)	Practical (P)	Credit (C)
3	0	0	3

Internal Assessment: 40 End Term Exam: 60 Duration of Exam: 3Hrs

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S.	Contents	Contact Hrs
No.		
1	Introduction: Definition and scope of industrial engineering, role of an industrial engineer in industry, functions of industrial engineer. Department and its organization, qualities of an industrial engineer Plant Layout and Material Handling: Different types of layouts viz. Product, Process and combination layouts, Introduction to layouts based on GT, JIT and Cellular, manufacturing systems, development of plant layout, types of material handling equipment, relationship of material handling with plant layouts.	
2	Work Study: Areas of applications of work study in industry, method study and work measurements and their interrelationship, reaction of management and labour to work study, role of work study in improving plant productivity and safety.	7 Hrs
3	Method Study: Objectives and procedure for methods analysis; select, record, examine, develop, define, install and maintain, recording techniques, micro motion and macro motion Study; Principles of motion economy, normal work areas and workplace design. Work Measurement: Objectives, work measurement techniques - time study, work sampling, Predetermined motion time standards (PMTS), Determination of time standards, Observed time, Basic time, Normal Time, Rating Factors, allowances, Standard Time.	10 Hrs

4	Value Engineering: Types of values, concept of value engineering,	8 Hrs
	phases of value engineering Studies, application of value engineering.	
5	Work Design: Concepts of job enlargements, job enrichment and job	10 Hrs
	rotation, effective job design considering technological and behavioral	
	factors.	
	Ergonomics: Introduction to ergonomics consideration in designing Man	
	Machine systems with special reference to design of displays and	
	controls.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2312.1	Understand the basic concepts of production, productivity and function of management
CO2	BTME-2312.2	To gain knowledge of hierarchy, principles and dimensions of planning function of organizations
CO3	BTME-2312.3	Determine the various theories and approaches related to Industrial Engineering
C04	BTME-2312.4	Discuss the importance of Value Engineering in today's Industry

	Contents	Contact Hrs
S.No.		
1	Number system and codes: Binary, octal, hexadecimal and decimal	10 Hrs
	Number systems and their inter conversion, BCD numbers (8421-2421),	
	gray code, excess–3 code, cyclic code, code conversion, ASCII, EBCDIC	
	codes. Binary addition and subtraction, signed and unsigned binary	
	numbers, 1's and 2's complement representation.	
2	Boolean Algebra: Basic logic circuits: Logic gates (AND, OR, NOT,	7 Hrs
	NAND, NOR, Ex-OR, Ex- NOR and their truth tables,), Universal	
	Gates, Laws of Boolean algebra, De-Morgan's theorem, Min term, Max	
	term, POS, SOP, KMap, Simplification by boolean theorems, don't care	
	condition Logic Families: Introduction to digital logic family such as	
	RTL, DTL, TTL, ECL, CMOS, IIR, HTL etc., their comparative study,	
	Basic circuit, performance characteristics, Wired logic, open collector	
	output etc.	
3	Combinational Logic: The Half adder, the full adder, subtractor circuit.	10 Hrs
	Multiplxer de-	
	multiplexer, decorder, BCD to seven segment Decorder, encoders.	
4	Flip flop and Timing circuit: set-reset laches, D-flipflop, R-S flip-flop, J-	8 Hrs
	K Flip-flop, Master	
	slave Flip flop, edge triggered flip-flop, T flip-flop.	
5	Registers & Counters: Synchronous/Asynchronous counter	10 Hrs

operation,Up/down synchronous	
counter, application of counter, Serial in/Serial out shift register, Serial	
in/Serial out shift register,	
Serial in/parallel out shift register, parallel in/ parallel out shift register,	
parallel in/Serial out shift	
register, Bi-directional register.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1		To present a problem oriented introductory knowledge of Digital circuits and its applications.
CO2	BTME-2313.2	Analyze the number system and codes
CO3	BTME-2313.3	To focus on the study of electronic circuits.
C04	BTME-2313.4	Analyze the registers &counters

S.	Contents	Contact Hrs
No. 1	Unit –I Strain energy: Introduction to strain energy, energy of dilation and distortion. Resilience, stress due to suddenly applied loads. Castigliano's and Maxwell's theorem of reciprocal deflection. Unit –II Theories of failure: Maximum principal stress theory, maximum shear stress theory, maximum principal strain theory, total strain energy theory, shear strain energy theory. Graphical representation and derivation of equation for these theories and their application to	16 Hrs
2	Unit –III Springs: Open and closed coiled helical springs under the action of axial load and/or couple. Flat spiral springs- derivation of formula for strain energy, maximum stress and rotation. Leaf spring-deflection and bending stresses Unit –IV Thin cylinders and spheres: Calculation of Hoop stress, longitudinal stress in a cylinder, effects of joints, change in diameter, length and internal volume. Principal stresses in sphere, change in diameter and internal volume	16 Hrs
3	Unit –V Thick cylinders: Derivation of Lame's equations, calculation of radial, longitudinal and hoop stresses and strains due to internal pressure in thick cylinders, compound cylinders, hub shrunk on solid shafts, shrinkage allowance and shrinkage stress. Unit –VI Bending of curved beams: Calculation of stresses in cranes or chain hooks, rings of circular and trapezoidal section, and chain links with straight sides	14 Hrs

4	4	Unit -VII Shear stresses in beams: Shear stress distribution in	14 Hrs
		rectangular, circular, I, T and channel section; built up beams. Shear	
		centre and its importance.	
		Unit -VIII Rotational discs: Stresses in rotating discs and rims of	
		uniform thickness; disc of uniform strength.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2401.1	To enhance deep and vigorous understanding of stress analysis in various machine elements
CO2	BTME-2401.2	To analyze and design a mechanical member from the strength point of view under various conditions
CO3	BTME-2401.3	Apply the concept of failure theories for design
C04	BTME-2401.4	Analyze and design thin, thick cylinders and springs

S. No.	Contents	Contact Hrs
1	Unit –I Static force analysis:, Concept of force and couple, free body diagram, condition of equilibrium, static equilibrium of mechanism, methods of static force analysis of simple mechanisms. Power transmission elements, considerations of frictional forces. Unit –II Dynamic force analysis Determination of forces and couples for a crank, inertia of reciprocating parts, dynamically equivalent system, analytical and graphical method, inertia force analysis of basic engine mechanism, torque required to overcome inertia and gravitational force of a four bar linkage.	20 Hrs
2	Unit –III Balancing: Necessity of balancing, static and dynamic balancing, balancing of single and multiple rotating masses, partial unbalanced primary force in an engine, balancing of reciprocating masses, and condition of balance in multi cylinder in line V-engines, concept of direct and reverse crank, balancing of machines, rotors, reversible rotors. Unit –IV Gears: Toothed gears, types of toothed gears and its terminology. Path of contact, arc of contact, conditions for correct gearing, forms of teeth, involutes and its variants, interference and methods of its removal. Calculation of minimum number of teeth on pinion/wheel for involute rack, helical, spiral, bevel and worm gears. Center distance for spiral gears and efficiency of spiral gears	20 Hrs
3	Unit –V Gear Trains: Types of gear trains, simple, compound and epicyclic gear trains, problems involving their applications, estimation of	14 Hrs

	velocity ratio of worm and worm wheel.	
	Unit -VI Gyroscopic motion and couples: Effect on supporting and	
	holding structures of machines. stabilization of ships and planes,	
	Gyroscopic effect on two and four wheeled vehicles and stone crusher.	
4	Unit -VII Kinematic synthesis of Mechanism: Freudenstien equation,	6 Hrs
	Function generation errors insynthesis, two and three point synthesis,	
	Transmission angles, least square techniques.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2402.1	To understand the basic concepts of inertia forces & couples applied to reciprocating parts of a machine
CO2	BTME-2402.2	To understand balancing of masses and design of gears & gear trains.
CO3	BTME-2402.3	To gain knowledge of kinematic synthesis and different applications of gyroscopic effect
C04	BTME-2402.4	Analyze the stability of automobile, naval ship and other related devices considering gyroscopic effect

S. No.	Contents	Contact Hrs
1	Unit –I Fundamentals of Fluid Mechanics: Introduction; Applications; Concept of fluid; Difference between solids, liquids and gases; Concept of continuum; Ideal and real fluids; Fluid properties: density, specific volume, specific weight, specific gravity, viscosity (dynamic and kinematic), vapour pressure, compressibility, bulk modulus, Mach number, surface tension and capillarity; Newtonian and non-Newtonian fluids. Unit –II Fluid Statics: Concept of static fluid pressure; Pascal's law and its engineering applications; Hydrostatic paradox; Action of fluid pressure on a plane submerged surface (horizontal, vertical and inclined): resultant force and centre of pressure; Force on a curved surface due to hydrostatic pressure; Buoyancy and flotation; Stability of floating and submerged bodies; Metacentric height and its determination; Periodic time of oscillation; Pressure distribution in a liquid subjected to: (i) constant acceleration along horizontal, vertical and inclined direction (linear motion), (ii) constant rotation.	16 Hrs
2	Unit –III Fluid Kinematics: Classification of fluid flows; Lagrangian and Euler flow descriptions; Velocity and acceleration of fluid particle; Local and convective acceleration; Normal and tangential acceleration; Path line, streak line, streamline and timelines; Flow rate and discharge mean velocity; One dimensional continuity equation; Continuity equation in Cartesian (x,y,z) , polar (r,θ) and cylindrical (r,θ,z) coordinates; Derivation of continuity equation using the Lagrangian method in Cartesian coordinates; Rotational flows: rotation, vorticity and circulation; Stream function and velocity potential function, and	20 Hrs

	relationship between them; Flow net.	
	Unit –IV Fluid Dynamics: Derivation of Euler's equation of motion in	
	Cartesian coordinates, and along a streamline; Derivation of Bernoulli's	
	equation (using principle of conservation of energy and equation of	
	motion) and its applications to steady state ideal and real fluid flows;	
	Representation of energy changes in fluid system (hydraulic and energy	
	gradient lines); Impulse momentum equation; Kinetic energy and	
	momentum correction factors; Flow along a curved streamline; Free and	
	forced vortex motions.	
3	Unit -V Dimensional Analysis and Similitude: Need of dimensional	18 Hrs
	analysis; Fundamental and derived units; Dimensions and dimensional	10 111 5
	homogeneity; Rayleigh's and Buckingham's π - method for dimensional	
	analysis; Dimensionless numbers (Reynolds, Froudes, Euler, Mach, and	
	Weber) and their significance; Need of similitude; Geometric, kinematic	
	and dynamic similarity; Model and prototype studies; Similarity model	
	laws.	
	Unit -VI Internal Flows: Laminar and Turbulent Flows: Reynolds	
	number, critical velocity, critical Reynolds number, hydraulic diameter,	
	flow regimes; Hagen – Poiseuille equation; Darcy equation; Head losses	
	in pipes and pipe fittings; Flow through pipes in series and parallel;	
	Concept of equivalent pipe; Roughness in pipes, Moody's chart.	
4	Unit -VII Pressure and Flow Measurement: Manometers; Pitot tubes;	6 Hrs
	Various hydraulic coefficients; Orifice meters; Venturi meters; Borda	
	mouthpieces; Notches (rectangular, V and Trapezoidal) and weirs;	
	Rotameters.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2403.1	To develop an understanding of the behavior of fluids at rest or in motion
		and the subsequent effects of the fluids on the boundaries as the mechanical
		engineers has to deal with fluids in various applications
CO2	BTME-2403.2	To develop an ability to apply the Bernoulli equation to solve problems in
		fluid mechanics
CO3	BTME-2403.3	An ability to use potential flow theory to solve problems in fluid mechanics
C04	BTME-2403.4	An ability to perform dimensional analysis for problems in fluid mechanics

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S.No.	Contents	ContactHrs
1	Unit -I Air Compressors- Introduction: Classification of Air	16 Hrs
	Compressors; Application of compressors and use of compressed air in	
	industry and other places; Complete representation of compression process	
	on P-v and T-s coordinates with detailed description of areas representing	
	total work done and polytropic work done; Areas representing energy lost	
	in internal friction, energy carried away by cooling water and additional	
	flow work being done for un-cooled and cooled compression on T-	
	Scoordinates; Best value of index of compression; Isentropic, polytropic	
	and isothermal efficiencies and their representation in terms of ratio of	
	areas representing various energy transfers on T-s coordinates.	
	Unit -II Reciprocating Air Compressors Single stage single acting	
	reciprocating compressor (with and without clearance volume):	
	construction, operation, work input and best value of index of compression,	
	heat rejected to cooling medium, isothermal, overall thermal, isentropic,	
	polytropic, mechanical efficiency, Clearance Volumetric efficiency,	
	Overall volumetric efficiency, effect of various parameters on volumetric	
	efficiency, free air delivery; Multistage compressors: purpose and	
	advantages, construction and operation, work input, heat rejected in	
	intercoolers, minimum work input, optimum pressure ratio; isothermal,	
	overall thermal, isentropic, polytropic and mechanical efficiencies;	
	Performance curves	
2	Unit -III Positive Displacement Rotary Compressors Introduction:	14 Hrs
	Comparison of rotary positive displacement compressors with reciprocating	
	compressors; Classification of rotary compressors; Construction, operation,	
	work input and efficiency of positive displacement type of rotary	
	compressors like Roots blower, Lysholm compressor and Vane type	

	l m.	
	Blower.	
	Unit –IV Thermodynamics of Dynamic Rotary Compressors:	
	Applications of Steady Flow Energy Equation and thermodynamics of	
	dynamic(i.e., centrifugal and axial flow m/cs) compressors; Stagnation and	
	static values of pressure, Temperature and enthalpy etc. for flow through	
	dynamic rotary machines; Complete representation of compression process	
	on T-S coordinates with detailed description of areas representing total	
	work done, polytropic work done; ideal work required for compression	
	process, areas representing energy lost in internal friction, energy carried	
	away by cooling water on TS coordinates for an uncooled and cooled	
	compression; <i>isentropic</i> , <i>polytropic</i> , and <i>isothermal efficiencies</i> as ratios	
	of the areas representing various energy transfers on T-S coordinates	
3	Unit –V Centrifugal Compressors:- Complete thermodynamic analysis of	16 Hrs
3		то птѕ
	centrifugal compressor stage; Polytropic, isentropic and isothermal	
	efficiencies; Complete representation of compression process in the	
	centrifugal compressor starting from ambient air flow through the suction	
	pipe, Impeller, Diffuser and finally to delivery pipe on T-S coordinates;	
	Pre-guide vanes and pre-whirl; Slip factor; Power input factor; Various	
	modes of energy transfer in the impeller and diffuser; Degree of Reaction	
	and its derivation; Energy transfer in backward, forward and radial vanes;	
	Pressure coefficient as a function of slip factor; Efficiency and out-coming	
	velocity profile from the impeller; Derivation of non-dimensional	
	parameters for plotting compressor characteristics; compressor	
	characteristic curves; Surging and choking in centrifugal compressors.	
	Unit -VI Axial Flow Compressors Different components of axial flow	
	compressor and their arrangement; Discussion on flow passages and simple	
	theory of aerofoil blading; Angle of attack; coefficients of lift and drag;	
	Turbine versus compressor blades; Velocity vector; Vector diagrams;	
	Thermodynamic analysis; Work done on the compressor and power	
	calculations; Modes of energy transfer in rotor and stator blade flow	
	passages; Detailed discussion on work done factor, degree of reaction,	
	blade efficiency and their derivations; <i>Isentropic</i> , <i>polytropic</i> and	
	isothermal efficiencies; Surging, Choking and Stalling in axial flow	
	compressors; Characteristic curves for axial flow compressor; flow	
	parameters of axial flow compressor like Pressure Coefficient, Flow	
	Coefficient, Work Coefficient, Temperature-rise Coefficient and Specific	
	Speed; Comparison of axial flow compressor with centrifugal compressor	
	and reaction turbine; Field of application of axial flow compressors.	
4	Unit -VII Gas Turbines Classification and comparison of the Open and	14 Hrs
	Closed cycles; Classification on the basis of combustion (at <i>constant</i>	
	volume or constant pressure); Comparison of gas turbine with a steam	
	turbine and IC engine; Fields of application of gas turbines; Position of gas	
	turbine in power industry; Thermodynamics of constant pressure gas	
	turbine cycle (Brayton cycle); Calculation of net output, work ratio and	
	thermal efficiency of ideal and actual cycles; Cycle air rate, temperature	
	ratio; Effect of changes in specific heat and that of mass of fuel on power	
L	, <u>6</u> 1	

and efficiency; Operating variables and their effects on thermal efficiency and work ratio; Thermal refinements like regeneration, inter-cooling and re-heating and their different combinations in the gas turbine cycle and their effects on gas turbine cycle i.e. gas turbine cycle. Multistage compression and expansion; Dual Turbine system; Series and parallel arrangements; Closed and Semi-closed gas turbine cycle; Requirements of a gas turbine combustion chamber; Blade materials and selection criteria for these materials and requirements of blade materials; Gas turbine fuels. Unit -VIII Jet Propulsion Principle of jet propulsion; Description of different types of jet propulsion systems like rockets and thermal jet engines, like (i) Athodyds (ramjet and pulsejet), (ii) Turbojet engine, and (iii) Turboprop engine. Thermodynamics of turbojet engine components; Development of thrust and methods for its boosting/augmentation; Thrust work and thrust power; Propulsion energy, Propulsion and thermal (internal) efficiencies; Overall thermal efficiency; Specific fuel c consumption; Rocket propulsion, its thrust and thrust power; Propulsion and overall thermal efficiency; Types of rocket motors (e.g. solid propellant and liquid propellant systems); Various common propellant combinations (i.e. fuels) used in rocket motors; Cooling of rockets; Advantages and disadvantages of jet propulsion over other propulsion systems; Brief introduction to performance characteristics of different propulsion systems; Fields of application of various propulsion units.

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2404.1	For providing comprehensive understanding and thermodynamic analysis of positive displacement air compressors and thermal turbo machines used in power generation, aircraft, spacecraft and rocket propulsion.
CO2	BTME-2404.2	Able to understand the thermodynamic working as well as performance of thermal turbo power machinery
CO3	BTME-2404.3	Analyze and understand the various types of compressor along with their practical applications
C04	BTME-2404.4	Discuss about the working of different types of turbines along their jet propulsion

1	Unit –I Metal Forming: Introduction and classification. Rolling process: introduction, classification, rolling mills, products of rolling, rolling defects and remedies. Forging: open and closed die forging, forging operations, hammer forging, press forging and drop forging, forging defects, their causes and remedies. Extrusion: classification, equipment, defects and remedies. Drawing: drawing of rods, wires and tubes, draw benches, drawing defects and remedies. Sheet metal forming operations: piercing, blanking, embossing, squeezing, coining, bending, drawing and deep drawing, and spinning. Punch and die set up. Press working: press types, operations, press tools, progressive and combination dies. Process variables and numerical problems related to load calculation in Rolling, Forging, Extrusion, Drawing and Sheet metal forming. High velocity forming of metals: introduction, electro-hydraulic forming, mechanical high velocity forming, magnetic pulse forming and explosive forming. Powder Metallurgy: Introduction, advantages, limitations, and applications methods of producing metal powders, briquetting and sintering.	15 Hrs
2	Unit-II Metal Cutting: Introduction to machining processes, classification, Mechanics of chip formation process, concept of shear angle, chip contraction and cutting forces in metal cutting, Merchant theory, tool wear, tool life, machinability. Numerical problems based on above mentioned topics, Fundamentals of measurement of cutting forces and chip tool interface temperature. Cutting tools: types, geometry of single point	15 Hrs

	cutting tool, twist drill and milling cutter, tool signature. Cutting tool materials: high carbon steels, alloy carbon steels, high speed steel, cast alloys, cemented carbides, ceramics and diamonds, and CBN. Selection of machining parameters. Coolants and lubricants: classification, purpose, function and properties.	
3	Unit III Machine Tools Lathe: classification, description and operations, kinematic scheme of lathe, and lathe attachments. Shaping and planing machine: classification, description and operations, drive mechanisms. Milling machine: classification, description and operations, indexing devices, up milling and down milling. Drilling machine: classification, description and operations. Boring machine: classification, description and operations. Grinding machines: classification, description and operations, wheel selection, grinding wheel composition and nomenclature of grinding wheels, dressing and truing of grinding wheels. Broaching machine: classification, description and operations. Speed, feed and machining time calculations of all the above machines.	15 Hrs

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-2405.1	Students will be able to Explain machining processes and cutting action involved
CO2	BTME-2405.2	Calculate / estimate machining parameters
CO3	BTME-2405.3	Differentiate among various machining processes
C04	BTME-2405.4	Select appropriate machining operation for particular application

No.		Hrs
1	UNIT-1 Fourier Series Periodic functions, Euler's formula. Even and odd	22 Hrs
	functions, Change of Interval, half range expansions, Fourier series of different wave forms.	
	UNIT-2 Laplace Transforms: Definition, Laplace transforms of various standard functions, properties of Laplace transforms, inverse Laplace transforms, transform of derivatives and integrals, Transform of	
	multiplication and division by t, convolution theorem, Laplace transform of unit step function. Applications to solution of ordinary linear differential	
	equations with constant coefficients.	
2	UNIT-3 Special Functions: Frobenius method for power series solution of	8 Hrs
	differential equations, Bessel's equation, Bessel functions of the first and	
	second kind, Legendre's equation, Legendre polynomial.	
3	UNIT-4 Partial Differential Equations: Formation of partial differential equations, Equations solvable by direct integration, Linear partial differential equations, homogeneous partial differential equations with constant coefficients. Solution by method of separation of variables, Applications: Wave equation and Heat conduction equation in one dimension. Solution of two dimensional Laplace equation (Cartesian coordinates).	14 Hrs
4	UNIT-5 Functions of Complex Variable: definition of Limit, continuity, derivative of complex functions, and analytic function. Necessary and	16 Hrs

sufficient conditions for analytic function (without proof), Cauchy-Riemann equation (Cartesian and polar co-ordinates), harmonic functions, orthogonal system, determination of conjugate functions. Miller's Thosmson method, Applications to fluid flow problems. Brief introduction to basic transformations, Bilinear transformations, complex integration: Line integrals in the complex plane, Cauchy's integral theorem, Cauchy's integral formula for analytic function and its derivatives. Taylor's and Laurent's expansions, singular points, poles, residue, Cauchy's Residue theorem, evaluation of real integrals by contour integration (F(cosx, sinx))

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3500.1	Students will be able to comprehensive understanding of Fourier series,
		Laplace transforms and various mathematical functions in engineering
		analysis
CO2	BTME-3500.2	To make students able to select various Engineering models for
		optimization and implementation with aforesaid applications
CO3	BTME-3500.3	To implement the various Mathematic equation for evaluating the results
C04	BTME-3500.4	To understand the function of Partial differential equation and complex
		variables

1	Meaning of design with special reference to machine design, definition and understanding of various types of design, design process, design and creativity, general design considerations, concept of tearing, bearing, shearing, crushing, bending and fracture. Designation of materials according to Indian standards code, basic criteria	12 Hrs
	of selection of material, mechanical properties of materials	
2	Concept of concurrent engineering in design, introduction to 'Design for X' manufacturing considerations in machine design, stress concentration, factor of safety under different loading conditions, design for static loading, design for variable loading for both limited and unlimited life, concept of fatigue and endurance strength. Design of fasteners: Design of rivets for boiler joints, lozenge joints, eccentrically loaded joints. Design of spigot and socket cotter joint, gib and cotter joint and knuckle joint. Design of welded joints for various loading conditions in torsion, shear or direct loads, eccentrically loaded joints	22 Hrs
3	Design of shaft and axles:	16 Hrs
	Design of solid and hollow shafts for transmission of torque, bending	
	moments and axial forces, Design of shaft for rigidity, Design of axle.	
	Design of keys and couplings:	
	Design of keys, design of splines, design of sleeve and solid muff coupling,	
	clamp or compression coupling, rigid and flexible flange coupling, design of	

	universal joint.	
4	Design of levers and links:	18 Hrs
	Design of levers(foot lever, hand lever, cranked lever, bell crank lever,	
safety valve lever and shoe brake lever), design of link		
	Design of pipe joints:	
	Stresses in pipe joints, design of pipe joints with oval flange, square flange,	
	design of seals and gaskets.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3501.1	To design the required size of shaft, key and coupling for the given application
CO2	BTME-3501.2	To identify various failures and calculate resisting areas of machine elements
CO3	BTME-3501.3	To design machine element subjected to direct, bending, twisting and combined stress
C04	BTME-3501.4	To implement the Mathematics formulas and thereafter design the various Mechanical elements

	Introduction to sensors and transducers, types of sensors, review of electro-				
	mechanical sensors and transducers - variable resistance, inductance and				
	capacitive pick ups, photo cells and piezo-electric transducers and				
	application of these elements for measurement of position / displacement,				
	speed / velocity / acceleration, force and liquid level. Resistance strain				
	gauges, gauge factor, bonded and unbounded gauges, surface preparation				
	and bonding technique signal conditioning and bridge circuits, temperature				
	compensation, application of strain gauges for direct, bending and torsional				
	loads. Introduction to amplifying, transmitting and recording devices.				
	Pressure and Flow Measurement				
	Bourdon tube, diaphragm and bellows, vacuum measurement - Mcleod				
	gauge, thermal conductivity gauge and ionization gauge; Dead weight				
	gauge tester. Electromagnetic flux meters, ultra-sonic flow meters and hot				
	wire anemometer: flow visualization techniques				
7	Temperature Measurement	10 Hrs			
/	Thermal expansion methods - bimetallic thermometers, liquid-in-glass	10 111 8			
	thermeter and filled-in-system thermometers; thermo-electric sensors -				
	common thermo couples, reference junction considerations, special				
	materials and configurations; metal resistance thermometers and				
	thermistors; optical and total radiation pyrometers; calibration standards.				
	Speed, Force, Torque and Shaft Power Measurement				
	Mechanical tachometers, vibration reed tachometer and stroboscope;				
	proving ring, hydraulic and pneumatic load cells, torque on rotating shafts;				
	Absorption, transmission and driving dynamo meters.				

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3503.1	To describe basic concepts of mechanical measurement, errors in	
		measurements and uncertainty	
CO2	BTME-3503.2	To identify the type of measurement instruments and their relevant	
		specification etc. which can be used in a particular process parameter	
		measurement selection?	
CO3	BTME-3503.3	To explain the theory of stress & strain, force and torque measurements	
C04	BTME-3503.4	To measure the speed, force, torque and shaft pressure of various measuring	
		components

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Introduction	13 Hrs
	Basic structure, general layout and type of automotive vehicles, Frameless and unitary construction; position of power unit	10 1110
	Power Unit	
	Power requirements - motion resistance and power loss, tractive effort and vehicle performance curves; selection of power unit and engine performance characteristics; pollution due to vehicle emission and exhaust emission control system, silencers, types of pistons and rings	
	Fuel Supply System	
	Air cleaner and fuel pumps; Air fuel requirements and carburation; constructional details of Carter carburetors and fuel injection systems; MPFi (Petrol), Diesel fuel system - cleaning, injection pump, injector and nozzles, Common Rail fuel supply system	
2	Lubrication and Cooling Systems	12 Hrs
	Necessity of lubrication; Desirable properties of lubricants; various types of	
	lubricants and oil additives; different systems of lubrication - oil filters, oil	
	pumps and oil pressure indicator; crank case ventilation and dilution. Purpose	
	of cooling, air and water cooling systems; radiator, thermostat, pump and fan Chassis and Suspension	
	Loads on the frame, considerations of strength and stiffness, engine mounting, independent suspension systems (Mac Pherson, Trailing Links, Wishbone), shock absorbers and stabilizers; wheels and tyres, tyre wear types, constructional details of plies	

3	Transmission system	14 Hrs			
	Basic requirements and standard transmission systems; constructional				
	features of automobile clutch, gear box, differential, front and rear axles;				
	overdrives, propeller shaft, universal joint and torque tube drive; Rear wheel				
	vs front wheel drive, principle of automatic transmission				
	Steering System				
	Requirement and steering geometry; castor action, camber and king pin				
	angle, toe-in of front wheels, steering linkages and steering gears; wheel				
	alignment; power steering, Ball re-circulating mechanism				
	Braking System				
	General braking requirements; Mechanical, hydraulic, vacuum power and				
	servo brakes; Weight transfer during braking and stopping distances				
4	Electric System	6 Hrs			
	Classification, Introduction to Conventional and transistorized ignition				
	systems; Charging, capacity ratings and battery testing; starter motor and				
	drive arrangements: voltage and current regulation				
	Maintenance				
	Preventive maintenance, trouble shooting and rectification in different				
	systems; engine tuning and servicing, major tools used for maintenance of				
	automobiles				

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3504.1	To understand the basic layout of an automobile	
CO2	BTME-3504.2	Understand the operation of engine cooling, lubrication, ignition, electrical	
		and air conditioning systems	
CO3	BTME-3504.3	Analyze the vehicle transmission, suspension, steering and braking systems	
C04	BTME-3504.4	Understand automotive electronics and explore latest developments in	
		automobiles

Contents of Syllabus

S.	Contents	Contact Hrs
No.		
1	Introduction to modeling (using any CAD software):	16Hrs
	2D drawing using sketcher – 2 Drawings	
	3D modeling using 3D features (Modeling of Crane Hook, Bench	
	Vice, Screw Jack components)	
	Assembling and drafting (any 2 above mentioned assemblies) with proper	
	mating conditions and interference checking. Surface modeling –	
	(Computer mouse, Plastic bottles with spraying Nozzle)	
2	Computer Aided Manufacturing:	8 Hrs
	Manual part programming on CNC Lathe and CNC Milling – (4	
	programs, 2 for each)	
	Computer Aided Part programming for CNC Lathe and CNC Milling to	
	generate tool path, NC code, and Optimization of tool path (to reduce	
	machining time) using any CAM software.	

CO1	BTME-3506.1	To understand the basics of working with Auto CAD, also to be familiar
		with various 2D commands
CO2	BTME-3506.2	Analyze and draw a 2D and 3D models of various Mechanical Components
CO3	BTME-3506.3	To understand the basics of part programming and CNC lathe and CNC
		milling machine

Program Code: ME-301

C04 Analyze and draw a 2D and 3D models of various Mechanical Components BTME-3506.4

Students will attempt any two questions. Each question carries 10 Marks

S.	Contents	Contact
No.		Hrs
1	Transmission Drives	
	Belt and rope drives: Basics, Characteristics of belt drives, selection of flat belt, Design of Flat belt, V-belt and rope (steel wire), Design of the pulley for the same, Chain Drives: Basics, Roller chains, polygonal effect, power rating, selection of chain, Gear drives: Standard system of gear tooth and gear module, gear tooth failure, strength of gear tooth, terminology of spur, helical, bevel, worm and worm wheel, Design of spur, helical, straight bevel gears, worm and worm wheel	
2	Bearings	8 Hrs
	Slider: Principle of hydrodynamic lubrication, modes of lubrication, Reynolds equation, bearing performance parameters, slider bearing design Roller: Types, selection guidelines, static and dynamic load carrying capacity, Stribeck's equation, equivalent bearing load, load life relationship, selection of bearing, comparison of roller and slider bearing	V === X
3	Design of Flywheel Introduction, Energy stored in a flywheel, stresses in a rim, design considerations Springs Types; end styles of helical compression spring; stress and deflection equation; surge in spring; nipping of leaf spring; Design of close-coil helical spring and multi leaf spring.	19 Hrs
4	Clutches	18 Hrs
	Design of contact clutches i.e. plate, multi-disc, cone and centrifugal	

clutches.	
Brakes	
Design of band, disc, block with shoe and internal expanding brakes.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3601.1	Able to design components of mechanical systems	
CO2	BTME-3601.2	Capable of designing mechanical components and assemblies for industrial	
		& domestic applications	
CO3	BTME-3601.3	Capable of modifying the existing systems and developing better	
		components	
C04	BTME-3601.4	Analyze and design of various types of clutches and brake of an	
		automobile, vehicle

4	1	0	4

Internal Assessment: 40 End Term Exam: 60 Duration of Exam: 3Hrs

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Introduction:	20 Hrs
	Concept of heat transfer, Difference between the subject of "Heat	
	Transfer" and its parent subject "Thermodynamics". Different modes of	
	heat transfer - conditions, convection, and radiation.	
	Conduction:	
	Fouier's law of heat conduction, coefficient of thermal conductivity, effect	
	of temperature and pressure on thermal conductivity of solids, liquids and	
	gases and its measurement. Three-dimensional general conduction	
	equation in rectangular, cylindrical and spherical coordinates involving	
	internal heat generation and unsteady state conditions. Derivation of	
	equations for simple one dimensional steady state heat conduction from	
	three dimensional equations for heat conduction though walls, cylinders	
	and spherical shells (simple and composite), electrical analogy of the heat	
	transfer phenomenon in the cases discussed above. Influence of variable	
	thermal conductivity on conduction through simple cases of walls /	
	cylinders and spheres. Equivalent areas, shape factor, conduction through	
	edges and corners of walls and critical thickness of insulation layers on	
	electric wires and pipes carrying hot fluids. Internal generation cases	
	along with some practical cases of heat conduction like heat transfer	
	through piston crown, through under-ground electrical cables/Hot fluid	
	pipes etc and case of nuclear fuel rod with and without cladding.	
	Introduction to unsteady heat transfer, Newtonian heating and cooling of	
	solids; definition and explanation of the term thermal diffusivity.	

	Numerical	
2	Theory of Fins: Concept of fin, classification of fins and their applications. Straight fins of uniform cross-section; e.g. of circular, rectangular or any other cross-section). Straight fins with varying cross-sectional area and having triangular or trapezoidal profile area. Circumferential fins of rectangular cross-section provided on the circumference of a cylinder. Fin performance: fin effectiveness and fin efficiency, total fin effectiveness, total fin efficiency. Optimum design of straight fin of rectangular and triangular profile area. Application of fins in temperature measurement of flow through pipes and determination of error in its measurement. Numerical.	8 Hrs
3	Convection: Free and forced convection. Derivation of three-dimensional mass, momentum and energy conservation equations (with introduction to Tensor notations). Boundary layer formation, laminar and turbulent boundary layers (simple explanation only and no derivation). Theory of dimensional analysis and its application to free and forced convective. heat transfer. Analytical formulae for heat transfer in laminar and turbulent flow over vertical and horizontal tubes and plates. Numerical. Newton's law of cooling. Overall coefficient of heat transfer. Different design criterion for heat exchangers. Log mean temperature difference for evaporator and condenser tubes, and parallel and counter flow heat exchangers, Calculation of number and length of tubes in a heat exchanger effectiveness and number of transfer units(NTU); Numerical.	12 Hrs
4	Convection with Phase Change (Boiling and Condensation): Pool boiling, forced convection boiling, heat transfer during pool boiling of a liquid. Nucleation and different theories of nucleation, different theories accounting for the increased values of h.t.c. during nucleate phase of boiling of liquids; different phases of flow boiling (theory only), Condensation, types of condensation, film wise condensation on a vertical and inclined surface, Numerical. Radiation: Process of heat flow due to radiation, definition of emissivity, absorptivity, reflectivity and transmissivity. Concept of black and grey bodies, Plank's law of nonchromatic radiation. Kirchoff's law and Stefan Boltzman's law. Interchange factor. Lambert's Cosine law and the geometric factor. Intensity of Radiation (Definition only), radiation density, irradiation, radiosity and radiation shields. Derivation formula for radiation exchange between two bodies using the definition of radiosity and irradiation and its application to cases of radiation exchange between three or four bodies (e.g. boiler or other furnaces), simplification of the formula for its application to simple bodies like two parallel surfaces, concentric cylinders and a body enveloped by another body etc. Error in Temperature measurement by a thermocouple probe due to radiation	20 Hrs

losses.	
103563.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3602.1	To understand the basic modes of heat transfer
CO2	BTME-3602.2	1
		engineering systems
CO3	BTME-3602.3	Obtain numerical solutions for conduction, convection and radiation heat
		transfer problems
C04	BTME-3602.4	Design heat exchangers using LMTD and NTU methods

S.	Contents	Contact
No.		Hrs
1	General Concepts: Impulse momentum principle; jet impingement on	6 Hrs
	stationary and moving flat plates, and on stationary or moving vanes with	
	jet striking at the centre and tangentially at one end of the vane;	
	calculations for force exerted, work done and efficiency of jet.	
	Basic components of a turbo machine and its classification on the basis of	
	purpose, fluid dynamic action, operating principle, geometrical features,	
	path followed by the fluid and the type of fluid etc. Euler's equation for	
	energy transfer in a turbo machine and specifying the energy transfer in	
	terms of fluid and rotor kinetic energy changes.	
2	Pelton Turbine:	16 Hrs
	Component parts and operation; velocity triangles for different runners,	
	work output; Effective head, available power and efficiency; design	
	aspects such as mean diameter of wheel, jet ratio, number of jets, number	
	of buckets with working proportions	
	Francis and Kaplan Turbines:	
	Component parts and operation velocity triangles and work output;	
	working proportions and design parameters for the runner; Degree of	
	reaction; Draft tubes - its function and types. Function and brief	
	description of commonly used surge tanks, Electro- Mechanical governing	
	of turbines	
3	Centrifugal Pumps:	16 Hrs
	Layout and installation; Main elements and their functions; Various types	
	and classification; Pressure changes in a pump - suction, delivery and	

	manometric heads; vane shape and its effect on head-capacity relationships; Departure from Euler's theory and losses; pump output and efficiency; Minimum starting speed and impeller diameters at the inner and outer periphery; Priming and priming devices, Multistage pumps - series and parallel arrangement; submersible pumps. Construction and operation; Axial and mixed flow pumps; Trouble shooting - field problems, causes and remedies. Similarity Relations and Performance Characteristics: Unit quantities, specific speed and model relationships, scale effect; cavitation and Thoma's cavitation number; Concept of Net Positive Suction Head (NPSH) and its application in determining turbine / pump setting	
4	Reciprocating Pumps: Components parts and working; pressure variations due to piston	12 Hrs
	acceleration; acceleration effects in suction and delivery pipes; work done	
	against friction; maximum permissible vacuum during suction stroke; Air vessels	
	Hydraulic Devices and Systems:	
	Const., operation and utility of simple and differential accumulator,	
	intensifier, fluid coupling and torque converter, Air lift and jet pumps;	
	gear, vane and piston pumps, Hydraulic Rams	

CO1	BTME-3603.1	To understand the basic concepts of impact of jet with respect to hydro
		turbo machines
CO2	BTME-3603.2	Discuss the different machinery along with their practical approach
CO3	BTME-3603.3	To understand and design various types of hydraulic turbines and their
		phenomenon for static and dynamic application
C04	BTME-3603.4	To gain knowledge of different hydraulic pumps and their characteristics for
		different applications in Mechanical engineering

Contents of Syllabus

S. No.	Contents	Contact Hrs
1	Determination of thermal conductivity of: A solid insulating material by slab method, Powder materials by concentric spheres method / or by some transient heat transfer technique, A metal by comparison with another metal by employing two bars when kept in series and /or in parallel under different boundary conditions, Liquids by employing thin layer	4 hrs
2	Determination of coefficient of heat transfer for free/forced convection from the surface of cylinder/plate when kept: Along the direction of flow, Perpendicular to the direction of flow, Inclined at an angle to the direction of flow	4 Hrs
3	To plot the pool boiling curves for water and to determine its critical point	2 Hrs
4	Determination of heat transfer coefficient for i) film condensation ii) drop-wise condensation	2 Hrs
5	Determination heat transfer coefficient by radiation and hence find the Stefan Boltzman's constant using two plates/two cylinders of same size by making one of the plates/cylinders as a black body.	2 Hrs
6	Determination of shape factor of a complex body by an analog technique	2 Hrs
7	 To plot the temperature profile and to determine fin effectiveness and fin efficiency for: 1. A rod fin when its tip surface is superimposed by different boundary condition like Insulated tip, Cooled tip and Temperature controlled tip 2. Straight triangular fins of various sizes and optimization of fin proportions 3. Circumferential fins of rectangular/triangular section 	4 Hrs

CO1	BTME-3604.1	Understand the effects of various heat transfer modes
CO2	BTME-3604.2	To experimentally determine the thermal conductivity of insulating rod and powders

CO3	BTME-3604.3	Comparative evaluation between natural and forced conventions through experimental approach
C04	BTME-3604.4	Determine the experimentation on radiation for finding out the value of Stefan Boltzmann's constant and emissivity of metallic surface

Program Code: ME-301

1	Determination of various efficiencies of Hydraulic Ram	2 Hrs
2	To draw characteristics of Francis turbine/Kaplan Turbine	2 Hrs
3	To study the constructional features of reciprocating pump and to	2 Hrs
	perform test on it for determination of pump performance	
4	To draw the characteristics of Pelton Turbine	2 Hrs
5	To draw the various characteristics of Centrifugal pump	2 Hrs
6	Determine the effect of vane shape and vane angle on the performance of centrifugal fan/Blower	2 Hrs
7	A visit to any Hydroelectric Power Station	2 Hrs

CO1	BTME-3605.1	Interpret the dynamic action of liquid jets in developing motive forces on objects
CO2	BTME-3605.2	Explain the concept of hydraulic ram and different types of turbine
CO3	BTME-3605.3	Illustrate the concept of specific speed and unit quantities as applied to turbines and pumps
C04	BTME-3605.4	Explain the construction of centrifugal pumps. Make use of the governing equations for head developed, power and efficiency of centrifugal pumps

Program Code: ME-301

SUBJECT TITLE: PERSONALITY DEVELOPMENT-II

SUBJECT CODE: BTPD-3621

SEMESTER: 6

CONTACT HOURS/WEEK:

Lecture (L)	Tutorial (T)	Practical (P)	Credit (C)
0	0	2	1

Internal Assessment: 60 External Assessment: 40

In this student has to attend the classes for improving their personality skills

CO1	BTPD-3621.1	Make use of techniques for self-awareness and self-development
CO2	BTPD-3621.2	Apply the conceptual understanding of communication into everyday practice
CO3	BTPD-3621.3	Understand the importance of teamwork and group discussions skills
C04	BTPD-3621.4	Develop time management and stress management
C05	BTPD-3621.5	Apply business etiquette effectively an engineer requires communicate fluently and develop all the soft and profession skills required for corporate sector
C06	BTPD-3621.6	Learn to overcome problems associated with personality

Program Code: ME-301

Internal Assessment: 40 End Term Exam: 60 Duration of Exam: 3Hrs

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Data, its Arrangements and Measures:	22 Hrs
	Introduction: Data, Data Array; Frequency Distribution Construction and Graphic representation. Mean, median, mode and standard deviation.	22 1113
	Probability and Probability Distributions:	
	Introduction: Definition probability and Probability Distribution; Conditional probability; Random variables, Poisson, Normal and Binomial	
	distributions	
	Sampling and Sampling Distributions:	
	Introduction: Fundamentals of Sampling, Large samples, small samples;	
	Normal sampling distributions; Sampling distribution of the means, t-	
	Distribution, F-Distribution, Chi-square Distribution.	
2	Errors in Numerical Calculations:	20 Hrs
	Errors and their analysis, general error formula, errors in a series	
	approximation	
	Solution of Algebraic and Transcendental Equations:	
	Bisection method, iteration method, Method of false position, Newton-	
	Raphson method, solution of systems of non linear equations.	
	Interpolation Method:	
	Finite difference, forward, backward and central difference, Difference of	
	polynomial, Newton's formulae for interpolation, central difference	
	interpolation formulae, Interpolation with unevenly spaced points, Newton's	

	general interpolation formula, interpolation by iteration.	
3	Numerical Differentiation and Integration: Numerical differentiation, maximum and minimum values of a tabulated function; Numerical Integration-trapezoidal rule, Simpson1/3 rule, Simpsons 3/8 rule, Newton-cots integration formulae; Euler-Meclaurin formula, Gaussian integration(One dimensional only) Solution of Linear Systems of Equations: Gauss Elimination method (fall and banded symmetric and unsymmetric systems), Gauss Jordon method. Eigen value problems (Power method only).	10 Hrs
4	Numerical solution of ordinary and partial differential equations: Solution by Taylor's series, Prediction -correction method, Boundary value problems, Prediction corrector method, Euler's and modified Euler's method, Runge-Kutta method, finite difference methods. Finite difference approximation to derivatives, Solution to Laplaces equation- Jacobi's method, Gauss -Siedel method.	8 Hrs

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3600.1	To understand the basic concepts of data collection and distribution for approximation of system problems
CO2	BTME-3600.2	To understand various types of optimization techniques for different application
CO3	BTME-3600.3	To implement the use of differentiation and Integration in numerical methods
C04	BTME-3600.4	To gain knowledge of ordinary and partial differential equations and its applications in Mechanical Engineering

1	Unit I	15 Hrs
	ERP Introduction, Benefits, Origin, Evolution and Structure: Conceptual	
	Model of ERP, the Evolution of ERP, the Structure of ERP.	
2	Unit II	10 Hrs
	Business Process Reengineering, Data ware Housing, Data Mining, Online	
	Analytic Processing (OLAP), Product Life Cycle Management (PLM), LAP,	
	Supply chain Management.	
3	Unit III	10 Hrs
	ERP Marketplace and Marketplace Dynamics: Market Overview,	
	Marketplace Dynamics, the Changing ERP Market. ERP- Functional	
	Modules: Introduction, Functional Modules of ERP Software, Integration of	
	ERP, Supply chain and Customer Relationship Applications.	
4	Unit IV	8 Hrs
	ERP Implementation Basics, ERP Implementation Life Cycle, Role of	
	SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and	
	Employees.	
5	Unit V	10 Hrs
	ERP & E-Commerce, Future Directives- in ERP, ERP and Internet, Critical	
	success and failure factors, Integrating ERP into organizational culture.	
	Using ERP tool: either SAP or ORACLE format to case study.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3600.1	Develop model for ERP for large projects
CO2	BTME-3600.2	Develop model for E-commerce architecture for any application
CO3	BTME-3600.3	Describe the advantages, strategic value, and organizational impact of utilizing an ERP system for the management of information across the functional areas of a business: sales and marketing, accounting and finance, human resource man-agreement, and supply chain.
C04	BTME-3600.4	Demonstrate a working knowledge of how data and transactions are integrated in an ERP system to manage the sales order process, production process, and procurement process.

1.	Design of Jigs: Introduction – Location Principles – Six Point Location Principle – Locators – Clamping Principles – Clamping Devices – Drill Jigs – Drill Bushes – Drill Jig Types – Design and Development of Jigs for given components.	9 Hrs
2	Design of Fixtures: Milling Fixtures – Milling Methods – Milling Fixture Types – Turning fixtures – Broaching Fixtures – Grinding Fixtures – Assembly, Inspection and Welding Fixtures – Modular Fixtures – Design and Development of Fixtures for given components.	11 Hrs
3	Design of Dies: Power presses types and construction details, die cutting operation, cutting action in die and punch, center of pressure, clearance and its significance, cutting forces, methods of reducing cutting forces, methods of punch support, strippers, stock stops, guide pilots, knockout, design of blanking and piercing dies. Design Concepts and description of the components of progressive dies. Design of progressive dies. Design of compound dies. Design of combination dies.	11 Hrs
4	Drawing Dies: Metal flow and factors affecting drawing, blank size calculations, drawing force, single and double acting drawing dies, design and development of drawing dies for different components.Bending and Forming Dies: Spring back, bend allowance; calculation of development length, bending force calculations types of bending dies. Curling dies.Forging process and forging dies. (Introductory Treatment)	11 Hrs

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-3615.1	To develop a solution oriented approach by in depth knowledge of Machine Tool Design
CO2	BTME-3615.2	To address the underlying concepts, methods and application of Machine Tool Design
CO3	BTME-3615.3	To analyze the different types of die structure
C04	BTME-3615.4	Study about bending and forming dies

- 1. Design Principles of Metal-Cutting Machine Tools by F. Koenigsberger
- 2. Machine Tool Design by N. K. Mehta. McGraw Hill Publishing
- 4. Machine Tool Design by Acherkan, Mir publishing
- 5. Machine Tool Design by S.K, Basu, Oxford and IBH Publishing
- 6. Machine tool design by Sen and Bhattacharya, CBS Publications

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Introduction:	11 Hrs
	Definition and scope of industrial engineering, Functions of industrial engineering department and its organization, Qualities of an industrial engineer, concept of production and productivity	11 1113
	Concepts of Management:	
	Functions of Management, Evolution of Management Thought: Taylor's Scientific Management, Fayol's Principles of Management, Douglas Mc-	
	Gregor's Theory X and Theory Y, Mayo's Hawthorne Experiments, Hertzberg's Two Factor Theory of Motivation, Maslow's Hierarchy of Human Needs – Systems Approach to Management.	
3	Designing Organizational Structures:	9 Hrs
	Concept, Importance and characteristics of organization, Types of organization - Project, matrix and informal organization. Span of control, Delegation of authority.	
	Management Planning, Decision Making and Control:	
	Steps, hierarchy, principles and dimensions of planning function,	
	Approaches to decision making, Decision support systems, Basic control process, control parameters, principles of control	
5	Plant Location & Layout:	10 Hrs
	Plant location: definition, factors affecting the plant location, comparison	
	of rural and urban sites-methods for selection. Plant layout: Needs for a good layout, Different types viz. Product, process and combination layouts, Introduction to layouts based on the GT, JIT and cellular	

	manufacturing systems, Development of plant layout.	
	Productivity:	
	Definition, reasons for low productivity, methods to improve	
	productivity, relation between work-study and productivity.	
7	Work Analysis:	10 Hrs
,	Definition, need and scope of Work Analysis. Method-study: Definition,	10 111 9
	objectives, step-by-step procedure, questioning techniques, charts and	
	diagrams for recording data. Principles of motion economy;	
	Development and installation of new method. Work measurement:	
	Definition, various techniques of work-measurement such as work-	
	sampling, stopwatch time study & its procedure, Job selection,	
	Equipment and Forms used for work measurement, need for rating	
	operator, methods of rating, allowances and their types, standard time.	
	Standard data techniques.	
	Value Engineering:	
	Definition, Types of values, concept, phases and application of value	
	engineering.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4701.1	Understand the basic concepts of production, productivity and function of
		management
CO2	BTME-4701.2	To gain knowledge of hierarchy, principles and dimensions of planning
		function of organizations
CO3	BTME-4701.3	Determine the various theories and approaches related to Industrial
		Engineering
C04	BTME-4701.4	Discuss the importance of Value Engineering in today's Industry

- 1. Philip E Hick, Industrial Engineering & Management, Tata McGraw Hill. 2014
- 2. Lawrence D. Miles, Techniques of Value Analysis and Engineering, McGraw Hill. 2012
- 3. R.N. Nauhria, RajnishParkash, Management of Systems, Wheeler Publishers 2004
- 4. S. Buffa, Modern Production Management, Wiley Eastern. 2008
- 5. H.S. Shan, Work Study and Ergonomics, DhanpatRai and Co. (P) Ltd. 2004

S. No.	Contents	Contact Hrs
1	Basic Concepts: Definition of Refrigeration and Air conditioning; Difference between Refrigeration and cooling; Difference between Refrigeration and Air conditioning; Brief history of Refrigeration and Air conditioning; Natural and Mechanical Refrigeration; Applications of Refrigeration and Air conditioning; Definitions of refrigerant, cooling/ Refrigeration effect, cooling capacity, heating effect, heating capacity; Units of refrigeration; Coefficient of performance and Energy Efficient Ratio; COP of a refrigerator; and COP/EPR of a heat pump; Single Phase Reversed Carnot cycle and its limitations; Two Phase Reversed Carnot cycle and its limitations; Methods of Refrigeration; Numerical. Gas Cycle Refrigeration and Aircraft Refrigeration & Air conditioning: Bell Coleman/Reversed Brayton/ Reversed Joule Cycle and its analysis; Numerical; optimum COP and pressure ratio (No mathematical Analysis); Applications of Gas Cycle Refrigeration; Necessity of aircraft refrigeration and air conditioning systems; Simple/basic aircraft refrigeration and air conditioning system (with and without evaporative cooler); Need of evaporator cooler; Boot Strap aircraft refrigeration and air conditioning system (with and without evaporative cooler); Regenerative aircraft refrigeration and air conditioning system; Reduced Ambient aircraft refrigeration and air conditioning system; Dry Air Rated Temperature (DART); Comparison of different aircraft refrigeration and air conditioning systems; Numerical.	13 Hrs

2	Vapour Compression Refrigeration Cycle:	10 Hrs
_	Vapour compression refrigeration system and its basic components;	10 1113
	Representation of Simple/ Theoretical vapour compression refrigeration	
	cycle on P-v, T-s and P-h diagrams; Dry versus wet compression;	
	expansion versus throttling of liquid refrigerant; Analysis of	
	Simple/Theoretical vapour compression refrigeration cycle; Introduction	
	of P-h diagram/chart and Refrigeration Tables; Determination of	
	properties of sub cooled, saturated and superheated refrigerant by using	
	saturated properties & specific heat tables/saturated & superheated	
	properties tables and P-h diagram; Compressor work and volumetric	
	efficiency; Effect on performance and cooling capacity due to change in	
	evaporator pressure, condenser pressure, sub cooling of liquid refrigerant,	
	super heating of suction vapours, use of liquid - vapour regenerative heat	
	exchanger; Effect on performance and cooling capacity due to heat	
	exchange of vapours with compressor cylinder walls, pressure drop in	
	suction (wire drawing) and discharge valves, pressure drop in evaporator	
	and condenser; Actual vapour compression refrigeration cycle on T-s and	
	P-h diagrams (No mathematical analysis); Numericals. Flash gas, its	
	advantages and disadvantages, and its removal: flash chamber, liquid sub-	
	cooler; Brief introduction (no mathematical analysis) to compound	
	(multistage) compression, its advantages, schematic representation of	
	these systems with use of flash chamber, water intercooler, flash	
	intercooler, liquid sub-cooler (independent and combination of these);	
	Brief introduction (no mathematical analysis) to multiple evaporator	
	systems, schematic representation of these systems with use of individual	
	and multiple expansion valves arrangements, with single and multiple	
	(individual and compound) compressor.	
3	Vapour Absorption Refrigeration Cycle (No Mathematical Analysis):	12 Hrs
	Principle of vapour absorption refrigeration; basic components of the	
	vapour absorption refrigeration system; Desirable properties of absorption	
	system refrigerant and absorbent; Aqua - ammonia vapour absorption	
	refrigeration system; Lithium Bromide - water absorption system (Single	
	and double effect);Electrolux refrigeration system; comparison between	
	vapour absorption and compression systems.	
	Refrigerants: Classification and nomenclature of refrigerants; Desirable	
	thermodynamic, chemical and physical properties of refrigerants;	
	comparative study of commonly used refrigerants and their fields of application; Azeotropes; Zeotropes; Effect of moisture and oil miscibility;	
	Refrigerants dying agents and antifreeze solution; leak detection and	
	charging of refrigerants; environmental aspects of conventional	
	refrigerants; Ecofriendly refrigerants and action plan to reduce ecological	
	hazards.	
	Alternative Refrigeration Systems and Low Temperature Refrigeration:	
	(No Mathematical Analysis)	
	Steam Jet Refrigeration; Mixed Refrigeration Systems; Vortex Tube	

	Refrigeration, Thermoelectric cooling; Transcritical Carbon Dioxide	
	Compression Refrigeration; Cascade Refrigeration System; Linde and	
	Claude cycles, cryogenics and its engineering applications.	
4	6. Air Conditioning Concepts and Applications:	23 Hrs
	Psychrometry; Dry Air; Moist Air; Basic laws obeyed by Dry Air and	
	Moist Air; Psychrometric properties of air: Dry bulb, wet bulb and dew	
	point temperatures, Relative and specific humidity, degree of saturation	
	adiabatic saturation temperature, enthalpy of air and water vapours;	
	Psychrometric chart and its use; Adiabatic mixing of moist air streams	
	without condensation and with condensation; Numerical.	
	Human requirement of comforts; effective temperature and comfort	
	charts; Industrial and comfort air conditioning	
	Psychometric Processes:	
	Basic psychrometric processes; Sensible heat process; Latent heat	
	process; Total heat process; Sensible heat factor; Evaporative cooling;	
	cooling with dehumidification; Heating with dehumidification; chemical	
	dehumidification; By-pass factor; Contact factor; Psychrometric processes	
	in air conditioning equipment: Cooling coils, Heating coils, cooling and	
	dehumidification coils, Evaporative coolers, Adiabatic dehumidifiers,	
	Steam injection, Air washer; Numerical.	
	Calculations for Air conditioning Load and for Rate and state of Supply	
	Air:	
	Sources of heat load; sensible and latent heat load; Cooling and heating	
	load estimation; Apparatus dew point temperature; Rate and state of	
	supply air for air conditioning of different types of premises; Numerical	
	Refrigeration and Air Conditioning Equipment:	
	Brief description of compressors, condensers, evaporators and expansion	
	devices; Cooling towers; Ducts; dampers; grills; air filters; fans; room air	
	conditioners; split units; Package and central air conditioning plants.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4702.1	Understand the basic concepts and principles of refrigeration and air
		conditioning systems
CO2	BTME-4702.2	Discuss different types of aircraft refrigeration system and their performances under different conditions
CO3	BTME-4702.3	To gain knowledge of refrigerants and factors influencing air conditioning
C04	BTME-4702.4	Study the importance of psychometric chart and along with processes and also determine the calculations related to air conditioning load

- 1. C.P. Arora, Refrigeration and Conditioning, Tata McGraw Hill. 2001
- 2. Manohar Prasad, Refrigeration and Conditioning, Wiley Eastern Limited.1998
- 3. Jordan and Priester, Refrigeration and Conditioning, Prentice Hall of India. 2008
- 4. W.F. Stoecker, Refrigeration and Conditioning, McGraw Hill.2010

S.	Contents	Contact Hrs
No.		
1	Introduction:	6 Hrs
	Basic concepts, Types of vibration, Periodic & Harmonic vibrations,	
	Methods of vibration analysis	
2	Vibration of Single Degree of Freedom System:	10 Hrs
	Undamped free vibrations, damped free vibrations and damped force	
	vibration system, Modelling of stiffness and damping (both viscous and	
	coulomb), estimation of damping by decay plots, vibration isolation	
	transmissibility, vibration measuring instruments.	
3	Two degrees of Freedom systems:	14 Hrs
	a) Principal modes of vibrations, natural frequencies, amplitude ratio,	
	undamped free, damped free, forced harmonic vibration, semi-definite	
	systems, combined rectilinear & angular modes; Lagrange's equation.	
	b) Application to un-damped and damped absorbers: Vibration absorber –	
	principle; centrifugal pendulum vibration absorber, torsional vibration	
	damper, untuned dry friction and viscous vibration damper, torsional	
	vibration abosrber.	
4	Multi-degree of freedom systems:	26 Hrs
	Undamped free vibrations, influence coefficients, Generalised coordinates,	
	orthogonality principal, matrix iteration method, Rayleigh and Dunkerley,	
	Holzer's, Stodola method, Eigen values and eigen vectors.	
	Continuous systems:	
	Lateral vibrations of a string, longitudinal vibrations of bars, transverse	
	vibrations of beams, Euler's equation of motion for beam vibration,	

natural frequencies for various end conditions, torsional vibration of	
circular shafts.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4703.1	Understand the basic concepts and principles of Vibrations, concept of
		damping and vibration measuring instruments systems
CO2	BTME-4703.2	To understand different types of absorber and their performances under
		different conditions
CO3	BTME-4703.3	To gain knowledge of various vibration equations and their factors
		influencing conditionality of situations
C04	BTME-4703.4	Analyze the multi degree freedom and continuous systems for the vibrating
		motion

Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Introduction:	10 Hrs
1	Introduction to Human Resource Management and its definition,	10 1115
	functions of Human Resource Management & its relation to other	
	managerial functions. Nature, Scope and Importance of Human Resource	
	Management in Industry, Role & position of Personnel function in the	
	organization.	
	Procurement and Placement:	
	Need for Human Resource Planning; Process of Human Resource	
	Planning; Methods of Recruitment; Psychological tests and interviewing;	
	Meaning and Importance of Placement and Induction, Employment	
	Exchanges (Compulsory Notification of vacancies) Act 1959, The	
	Contract Labour (Regulation & Abolition) Act 1970.	
2	Training & Development:	8 Hrs
	Difference between training and Development; Principles of Training;	
	Employee Development; Promotion-Merit v/s seniority Performance	
	Appraisal, Career Development & Planning.	
	Job analysis & Design:	
	Job Analysis: Job Description & Job Description, Job Specification.	_
3	Job Satisfaction:	8 Hrs
	Job satisfaction and its importance; Motivation, Factors affecting	
	motivation, introduction to Motivation Theory; Workers ' Participation,	

	Quality of work life.	
	The Compensation Function:	
	Basic concepts in wage administration, company's wage policy, Job	
	Evaluation, Issues in wage administration, Bonus & Incentives, Payment	
	of Wages Act-1936, Minimum Wages Act-1961	
4	Integration:	14 Hrs
	Human Relations and Industrial Relations; Difference between Human	
	Relations and Industrial Relations, Factors required for good Human	
	Relation Policy in Industry; Employee Employer relationship Causes and	
	Effects of Industrial disputes; Employees Grievances & their Redressal,	
	Administration of Discipline, Communication in organization,	
	Absenteeism, Labour Turnover, Changing face of the Indian work force	
	and their environment, Importance of collective Bargaining; Role of trade	
	unions in maintaining cordial Industrial Relations.	
	Maintenance:	
	Fringe & retirement terminal benefits, administration of welfare	
	amenities, Meaning and Importance of Employee Safety, Accidents-	
	Causes & their Prevention, Safety Previsions under the Factories Act	
	1948; Welfare of Employees and its Importance, Social security, Family	
	Pension Scheme, ESI act 1948, Workmen's Gratuity Act 1972, Future	
	challenges for Human Resource Management.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4720.1	Develop the understanding of the concept of human resource management and to understand its relevance in organizations
CO2	BTME-4720.2	Develop necessary skill set for application of various HR issues
CO3	BTME-4720.3	Analyze the strategic issues and strategies required to select and develop manpower resources
C04	BTME-4720.4	Integrate the knowledge of HR concepts to take correct business decisions

- 1. T.N. Chhabra- Human Resource Management (DhanpatRai& Co.) 2010
- 2. A.P Verma- Human Resource Management (S.K Kataria & Sons) 2008

Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Introduction: Introduction to Operations Research: Basics definition, scope, objectives, phases, models and limitations of Operations Research. Linear Programming Problem – Formulation of LPP, Graphical solution of LPP. Simplex Method, Artificial variables, Big-M method, two-phase method, degeneracy and unbound solutions.	8 Hrs
2	Transportation Problem: Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions – Northwest corner rule, least cost method and Vogel's approximation method. Optimality test: the stepping stone method and MODI method. Assignment Model: Formulation. Hungarian method for optimal solution. Solving unbalanced problem. Traveling salesman problem and assignment problem. Sequencing Models: Solution of Sequencing Problem—Processing n Jobs through 2 Machines—Processing n Jobs through 3 Machines – Processing 2 Jobs through m machines—Processing n Jobs through m Machines.	12 Hrs
3	Dynamic Programming: Characteristics of dynamic programming. Dynamic programming approach for Priority Management employment smoothening, capital budgeting, Stage Coach/Shortest Path, cargo loading and Reliability problems, Game Theory: Competitive games, rectangular games, saddle point, minimax (maxim in) method of optimal strategies, value of the game.	12 Hrs

	Solution of games with saddle points, dominance principle. Rectangular	
	games without saddle point – mixed strategy for 2 X 2 games.	
4	Replacement Models: Replacement of Items that Deteriorate whose	10 Hrs
	maintenance costs increase with time without change in the money value.	
	Replacement of items that fail suddenly: individual replacement policy,	
	group replacement policy.	
	Inventory Models: Inventory costs. Models with deterministic demand—	
	model (a) demand rate uniform and production rate infinite, model (b)	
	demand rate non-uniform and production rate infinite, model (c) demand	
	rate uniform and production rate finite.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4720.1	Solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained
CO2	BTME-4720.2	Determine optimal strategy for Minimization of Cost of shipping of products from source to Destination/ Maximization of profits of shipping products using various methods, Finding initial basic feasible and optimal solution of the Transportation problems
CO3	BTME-4720.3	Model competitive real-world phenomena using concepts from game theory. Analyse pure and mixed strategy games
C04	BTME-4720.4	Formulate Network models for service and manufacturing systems, and apply operations research techniques and algorithms to solve these Network problems

Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S.	Contents	Contact Hrs
No.		
1	Introduction: Meaning, definition, functions of materials management, Concept of	4 Hrs
	integrated material management, Relationship of material management with other Organizational functions.	
2	Material Planning & Budgeting:	6 Hrs
	Need for material planning, Factors affecting material planning,	
	Techniques of material planning, Material classification, codification and	
	standardization, Material budgeting - meaning and need, techniques of	
	material budgeting.	
3	Inventory Control:	22 Hrs
	Need and meaning of inventory, types of inventory, functions of	
	inventory control, Inventory costs, Inventory control tool - ABC, VED,	
	XYZ and FSN: Economic order Quantity and replenishment of stocks.	
	Physical control of inventory: Fixed order, Two bin and Kardex systems	
	Material requirement planning (MRP-I) Spare parts control for	
	maintenance purposes. Evaluation of inventory control performance.	
	Concept of Just-in-Time(JIT). Use of computers for inventory control	
	Purchasing:	
	Purchasing principles, procedures and systems, Functions of purchasing,	

	Make-or-buy decision, Vendor development and vendor rating. Factors affecting purchase decisions, Legal aspects of purchasing,	
	Documentation and procedure for import.	
4	Storage:	8 Hrs
	Functions and importance of store keeping, types of stores, store	
	accounting and store verification, Legal aspects of store keeping,	
	Management of surplus, scrap and obsolete items. Importance of material	
	handling in store keeping, handling equipment.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4720.1	Identifying the scope for integrating materials management function over the logistics and supply chain operations
CO2	BTME-4720.2	Identify, study, compare, and evaluate alternatives, select and relate with a good supplier
CO3	BTME-4720.3	Analyzing the materials in storage, handling, packaging, shipping distributing and standardizing.
C04	BTME-4720.4	Integrate important materials functions to both products and services & use MRP,ERP,& PLM managing materials

SUBJECT TITLE: SOLAR ENERGY

SUBJECT CODE: BTME-4720

SEMESTER: 7th

CONTACT HOURS/WEEK:

Lecture (L)	Tutorial (T)	Practical (P)	Credit (C)
3	0	0	3

Internal Assessment: 40 End Term Exam: 60 Duration of Exam: 3Hrs

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S.	Contents	Contact Hrs
No. 1	Introduction: Renewable and non-renewable energy sources, their availability and growth in India; energy consumption as a measure of Nation's development; strategy for meeting the future energy requirements	10 Hrs
2	Solar Energy: Solar radiation - beam and diffuse radiation; earth sun angles, attenuation and measurement of solar radiation; Optical properties of materials and selective surfaces; Principles, general description and design procedures of flat Platte and concentrating collectors; Performance analysis of cylindrical and parabolic collectors; Solar energy storage systems - their types, characteristics and capacity; solar ponds. Applications of solar energy in water, space and process heating, solar refrigeration and air conditioning; water desalination and water pumping; solar thermal power generation; solar cells and batteries; economic analysis of solar systems.	7 Hrs
3	Wind Energy: Principle of wind energy conversion; Basic components of wind energy conversion systems; wind mill components, various types and their constructional features; design considerations of horizontal and vertical axis wind machines: analysis of accodynamic forces acting on wind mill blades and estimation of power output; wind data and site selection	10 Hrs

	considerations.	
4	Direct energy conversion systems:	8 Hrs
	Magnetic Hydrodynamic (MHD) Generator: gas conductivity and	
	MHD equations; operating principle, types and working of different	
	MHD systems – their relative merits; MHD materials and production of	
	magnetic fields.	
	Thermo-electric generators: Thermo-electric effects and materials;	
	thermo-electric devices and types of thermo-electric generators;	
	thermo-electric refrigeration.	
	Thermionic generators: thermoionic emission and materials; working	
	principle of thermionic Fuel Cells: thermodynamic aspects; types,	
	components and working of fuel cells	
	Performance, applications and economic aspects of above mentioned	
	direct energy conversions systems.	
5	Miscellaneous Non-Conventional energy Systems:	10 Hrs
	Bio-mass: Concept of bio-mass conversion, photo-synthesis and bio-	
	gasification; Bio gas generators and plants - their types constructional	
	features and functioning; digesters and their design; Fuel properties of	
	bio gas and community bio gas plants	
	Geothermal: Sources of geothermal energy - types, constructional	
	features and associated prime movers.	
	Tidal and wave energy: Basic principles and components of tidal and	
	wave energy plants; single basin and double basin tidal power plants;	
	conversion devices Advantages/disadvantages and applications of	
Ì	above mentioned energy systems.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4720.1	Conceptual knowledge of the technology, economics and regulation related
		issues
		associated with solar power development and management
CO2	BTME-4720.2	Ability to analyse the viability of solar power projects
CO2	DTME 4700.2	C 1 Tr 4 1 4 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
CO3	BTME-4720.3	Capability to integrate various options and assess the business and policy environment regarding solar power projects
C04	BTME-4720.4	Advocacy of strategic and policy recommendations on usage of solar power

Instructions for Question Paper

The question paper consist of three sections A, B & C. Section-A is compulsory consisting of 10 short answer type questions of 2 marks each from the whole syllabus. Section-B consists of 6 questions covering whole syllabus. Students will attempt any four questions. Each question carries 5 marks. Section-C consists of 3 questions from the whole syllabus. Students will attempt any two questions. Each question carries 10 Marks

S. No.	Contents	Contact Hrs
1	Introduction: Historical Development; Engineering applications of Optimization; Optimization techniques – classical and advanced techniques. Art of Modeling Origin of OR and its role in solving industrial problems: General approach for solving OR problems. Classification of mathematical models: various decision making environments.	10 Hrs
2	Linear Programming: Formulation of linear mathematical models: Graphical and simplex techniques for solution of linear programming problems, Motivation of simplex method, Simplex algorithm and construction of simplex tableau; Simplex criterion; Minimization versus maximization problems, Big-M method and two phase method, Introduction to duality theory and sensitivity analysis.	7 Hrs
3	Transportation and Assignment Models: Various initial basic feasible solutions methods, Optimization of transportation and assignment using different methods considering the concept of time and cost function. Dynamic Programming: Characteristics of dynamic programming problems, deterministic dynamic programming, and probabilistic dynamic programming. Queuing Theory: Basic structure of queuing model, Types of queuing situation: Queuing models with Poisson's input and exponential service, their application to simple situations.	20 Hrs

4	Network Models: Shortest route and traveling sales man problems,	8 Hrs
	PERT & CPM, analysis of time bound project situations, construction of	
	networks, identification of critical path, slack and float, crashing of	
	network for cost reduction.	
	Non-linear Programming Models: Graphical illustration to non-linear	
	programming problems, introduction to different types of non-linear	
	programming problems. Problems related to the topic.	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4720.1	Recall the theoretical foundations of various issues related to linear programming modeling to formulate real-world problems as a L P model
CO2	BTME-4720.2	Demonstrate the optimized material distribution schedule using transportation model to minimize total distribution cost.
CO3	BTME-4720.3	Identify appropriate equipment replacement technique to be adopted to minimize maintenance cost by eliminating equipment break-down
C04	BTME-4720.4	Demonstrate the various selective inventory control models to analyse and optimize inventory systems.

Students will attempt any two questions. Each question carries 10 Marks

Contents of Syllabus

S. No.	Contents	Contact Hrs
1	Introduction:	5 Hrs
1	Tribological considerations, Nature of surfaces and their contact, Physical, mechanical properties of surface layer, Geometrical properties of surfaces, methods of studying surfaces, Study of contract of smoothly and rough surfaces	31113
2	Friction and Wear:	10 Hrs
	Role of friction and laws of static friction, causes of friction, adhesion	
	theory, Laws of rolling friction, Friction of metals and non-metals; Friction	
	measurements. Definition of wear, mechanism of wear, friction affecting	
	wear, wear measurement, Wear of metals and non-metals.	
3	Lubrication and Lubricants:	10 Hrs
	Introduction, dry friction, Boundary lubrication, classic hydrodynamics,	
	hydrostatic and elasto hydrodynamic lubrication, Functions of lubricants,	
	Types of lubricants and their industrial uses, properties of liquid and grease	
	lubricants; lubricant additives, general properties and selection.	
4	Special Topics:	15 Hrs
	Selection of bearing and lubricant, bearing maintenance, diagnostic	
	maintenance of tribological components, lubrication systems, Filters and filtration.	

CO1	BTME-4713.1	The basic objective of the subject is to deal fundamentals of friction, wear and lubrication
CO2	BTME-4713.2	The subject is useful in understanding the nature of surfaces of engineering materials.
CO3	BTME-4713.3	The basic objective of the subject is to learn about types of lubricants.
C04	BTME-4713.4	The subject is useful in understanding the various tribological applications.

	and Hybrid Vehicles and Grid interconnection Issues:	
	Introduction to smart charging: Grid to vehicle and vehicle to grid,	
	smart metering and ancillary services, preliminary discussion on	
	vehicle to vehicle and vehicle to personal communication systems,	
	introduction to battery charging stations and its installation and	
	commissioning, preliminary discussion on estimation on station	
	capacity and associated technical issues, different connectors,	
	policy regulations and standards for EV and HV, BEE standards,	
	Indian and Global scenario, case studies	
	maian and Giovai sectiano, ease studies	

COURSE OUTCOMES: On completion of this course, the students will be able to

CO1	BTME-4718.1	To deliver and discuss the about architecture, power electronics based drive control systems, battery management systems and grid integration issues of Electric and Hybrid vehicle
CO2	BTME-4718.2	Discuss the about battery management systems
CO3	BTME-4718.3	Discuss the about grid integration issues of Electric and Hybrid vehicle
C04	BTME-4718.4	Demonstrate different configurations of electric vehicles and its components, hybrid vehicle configuration by different techniques, sizing of components and design \ optimization and energy management

- 1. Iqbal Hussein, "Electric and Hybrid Vehicles: Design Fundamentals", CRC Press, 2nd Edition, 2003.
- 2. James Larminie, John Lowry, "Electric Vehicle Technology", Wiley publications, 1Edition, 2003
- 3. B D McNicol, D A J Rand, "Power Sources for Electric Vehicles", Elsevier publications, 1st Edition, 1998.
- 4. Seth Leitman, "Build Your Own Electric Vehicle" MC Graw Hill, 1st Edition, 2013

SYLLABUS

SEMESTER-VIII

Program Name: B. Tech. Mechanical Engineering

Program Code: ME-301

SUBJECT TITLE: SOFTWARE TRAINING

SUBJECT CODE: BTME-4801

SEMESTER: 8

CONTACT HOURS/WEEK:

Lecture (L)	Tutorial (T)	Practical (P)	Credit (C)
0	0	0	6

Internal Assessment: 100 End Term Exam: 200

In this the student has to do the software training and has to make a file for the same.

CO1	BTME-4801.1	Select the appropriate software such as Auto CAD, Solid Works, Ansys, etc.
CO2	BTME-4801.2	Design the individual parts followed by their respective assemblies.
CO3	BTME-4801.3	Analyze and design the industrial components as per their practical applications
C04	BTME-4801.4	Prepare for your software file and seminar ppt. report

Program Name: B. Tech. Mechanical Engineering

Program Code: ME-301

SUBJECT TITLE: INDUSTRIAL TRAINING

SUBJECT CODE: BTME-4802

SEMESTER: 8th

CONTACT HOURS/WEEK:

Lecture (L)	Tutorial (T)	Practical (P)	Credit (C)
0	0	0	10

Internal Assessment: 200 End Term Exam: 300

In this the student has to do the industrial training and has to make a file for the same.

CO1	BTME-4802.1	To participate in ongoing and upcoming projects of the industry
CO2	BTME-4802.2	Determine the use of advanced techniques and machining tools
CO3	BTME-4802.3	Interact with industry personnel and follow the Engineering practices
C04	BTME-4802.4	Develop awareness about general workshop behavior and built a team skills
